SEE PAGE 28 FOR FULL DESCRIPTION AND PRICES.

Before Writing Your Order Please Read This

Seed That Are Postpaid. All seed quoted by the packet, ounce, or pound includes postage to be paid by us. Seed is also quoted "by express," and this always means express charges to be paid by you. In this connection you have the choice of having them sent by Freight or Express, and we will use our judgement unless you instruct us. If, on the other hand, it is more convenient for you to have them come to you by Parcel Post, add the necessary postage to your remittance. Please make this very plain in your order.

Cost Of Sending Money To Us. In all cases where your order amounts to \$1.00 or more, deduct the cost of your Post Office or Express Money Order.

Our Prices. Quotations made in this Catalog are those in force when this book goes to press. It can be very easily seen that changes may have to be made in some articles. We will, how-

ever, hold them as long as we can. We have priced everything very low, and if advances occur, we will notify you.

Terms. They are Cash with order. Our reliability is unquestioned, but if for any reason you wish to have your order sent C. O. D., and if it amounts to \$5.00 or more, remit us about one fourth of the amount, and we will send out the goods with C. O. D. charges for the balance. On large orders we will be very glad to quote prices, and enter into correspondence with you.

Warranty Of Seeds. There are manifestly many causes for a poor crop—too much wet or too much dry weather, too deep or too shallow planting, until it is impossible for any responsible seedsmen to guarantee results; therefore, in common with the other members of the American Seed Trade Association, we give no warranty expressed or implied as to description, quality, productiveness or any other matter of any seeds sent out and are not in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are at once to be returned.

Special Inquiry Sheet For Large Orders

You will find in this Catalog a loose sheet of blue paper which we intend for you to use for your convenience and to save you money. There are a great many seeds on which fluctuations occur, and it therefore is impossible in this Catalog to quote quantity prices. Therefore, if you want to make up a large order, or want a quotation on a large amount of one item, let us quote you the price on that day. No doubt we can save you money. We will tell you in our judgment whether shipment should be made by freight or express, and if you want to know before

hand, will tell you about what the charges will be. We don't claim to know it all, but we bring in and ship out hundreds of cars of seed a year, making thousands of individual shipments, and therefore should know how to go about getting this information for you. Of course it takes time and means some trouble, but it is all a part of Mixson Service, which is to give you the very best value for your dollar. So use the quotation sheet, and the oftener you write us, the better we will like it. Don't use this sheet for small Garden Orders for packets, ounces, etc., as these prices are plainly quoted.

Mixson's High-Grade Beans

CURRIE'S RUSTLESS BLACK WAX

Prices On All Green Podded Bush Beans

All of these varieties listed from Improved Red Valentine through Full Measure will be sold at the same price as long as our stock lasts. Packet, 10c; 1-2 pound, 20c; pound, 35c; 2 pounds, 60c, all postpaid; 15 pounds not postpaid, \$2.70; 100 pounds, \$17.00.

Yellow Podded Beans

Warwell's Kidney Wax. Very popular bean for either market or home use, extra early, maturing in five to six weeks with favorable weather. A strong, vigorous grower, producing a heavy crop of long, showy pods of a beautiful waxy appearance, and is remarkably free from "rust". It is tender and of fine flavor.

Pencil Pod Prolific Black Wax. A strong growing bush sort, about 15 inches in height, with heavy and abundant foliage. The pods are of a light golden yellow color, almost round, very thick and meaty and deeply ridged or saddlebacked; quite stringless and of a fine flavor. It follows the Prolific Black Wax in earliness and is highly productive.

Currie's Rustless Black Wax. A black seeded sort of extreme earliness and great productivity. Pods of moderate size, flat in shape, but of fine flavor; color of a light golden yellow.

Davis Kidney Wax. Very popular with market growers who like it for its very attractive appearance. Makes long, straight, yellow pods. The beans are white and therefore can be used to advantage as shelled beans. Very early.

Hodson's Wax. A very prolific variety, though not quite as early as some of the others. Extremely vigorous in growth, bearing long, straight pods.

Prices On All Wax Podded Bush Beans

All of these varieties listed from Warwell's Kidney Wax through Hodson's Kidney Wax will be sold at the same price as long as stock lasts. Packet, 10c; 1-2 pound, 25c; pound, 40c; 2 pounds, 70c, all postpaid; 15 pounds, not postpaid, \$3.00; 100 pounds, \$19.00.

Culture.—In the upper part of Carolina and Georgia bush beans should be planted from March to September. Plant a row or more in garden once a month so that fresh beans will always be coming in. Plant in drills about 2 feet apart, one bean every 3 inches, cover 2 inches deep. Have soil well prepared, heavy application of 16 per cent. acid phosphate is advised and potash too in hardwood ashes or any form obtainable. The soil should be warm and moist when seed is put in. When the bloom begins to form draw the earth to the plant. Keep the soil loose by frequent working, but do not work when ground is wet or when in bloom. Pick beans as fast as they are ready to eat: this increases the yield. Plant 1 lb. to 75 feet of row, 75 lbs. per acre.

Green Podded Beans

Improved Red Valentine. An early round-podded variety. A general favorite among truckers on account of the number of good qualities it combines. Ready to pick in seven weeks after planting.

Hopkin's Red Valentine. A strain of Red Valentine planted extensively in some sections and in private gardens.

Black Valentine. The earliest and most productive of all green-podded varieties, satisfactory to market-gardener and private gardener alike. Very hardy, standing more cold than any other variety.

Extra Early Refugee. An old favorite, pods straight and stringless. Adapted to all uses—table, shipping and canning.

Late Refugee or 1000-to-1. Specially recommended for summer and late planting. Most productive of a beans with very long bearing period. Stands hot suns better than any other variety and the heavy bush also protects the fruit from frost.

Longfellow. A very early round podded bean, extremely prolific, used both for early and late plantings.

Mohawk or Brown Six Weeks. An old time variety. Long, green flat pods, very early and prolific. Many still use this old sort.

Full Measure. This magnificent round-podded bush bean bears long, round green pods, always solid, stringless and exceedingly prolific. The pods are of an attractive green color, 5 inches long, firm and tender. The plant is of a handsome, stiffly erect growth, with dark foliage, very prolific and practically blight-proof. Becoming in great demand on account of its handsome appearance and luscious quality. Good for both home or market gardeners' use.

BLACK VALENTINE BEANS

Bush and Pole Lima Beans

HENDERSON'S BUSH LIMA

Large White or King of the Garden Lima.

Produces a big crop of very large fine flavored beans. Strong, vigorous, healthy plants. The greatest producer and most highly flavored of the large lima type. Pkt. 10c, 3 pkts. 25c, lb. 45c, 2 lbs. 75c, postpaid. 15 lbs., not prepaid, \$3.50, 100 lbs. \$22.00.

Pole Snap Beans

Kentucky Wonder, or Old Homestead. It is almost needless to say anything about this great pole bean, for who has not grown it? Popular everywhere in the South for years because of its wonderful all-summer production of splendid beans. The yield is great, the quality is good, and no bean is more sure of making a crop. It bears in 65 days from planting; should be kept picked so that it will continue bearing until frost. The beans are 6 to 12 inches long, tender and rich. It should be planted in every garden. Be sure to get the genuine Kentucky Wonder and not any of the tough substitutes. Pkt. 10c, 3 pkts. 25c, lb. 40c, 2 lbs. 70c, postpaid. 15 lbs., not prepaid, \$3.10, 100 lbs. \$19.00.

McCaslan Pole Bean. This is a white prolific pole bean of the finest quality. It originated in Georgia and because of its many splendid qualities, is said to be superior to the famous Kentucky Wonder. There is a great demand for this bean and we have never heard of a planter who was not more than pleased with results. Pods are large, deep green and stringless. Filled completely and are of the very finest quality. Plant it and work it right, give it good rich earth and keep the beans picked—it will give you more beans than you can use until frost and you can save a large quantity dry for winter use. It is also good to can green. This is certainly a bean you should plant. Pkt. 10c, 3 pkts. 25c, lb. 40c, 2 lbs. 70c, postpaid. 15 lbs., not prepaid, \$3.50, 100 lbs. \$22.00.

Georgia Cornfield Bean. This is a genuine Cornfield Bean that will grow and yield a big crop in any cornfield in the South. We have tried this bean out for several years and now that we have found it satisfactory in every way, are this year offering it to our customers for the first time and recommend it to you without reserve. It grows a big vine and this is filled with a great crop of tender green round pod beans that you will enjoy eating and can sell any surplus at the best market price. Pkt. 10c, 3 pkts. 25c, 1 lb. 40c, 2 lbs. 70c, postpaid. 15 lbs., not prepaid, \$3.35, 100 lbs. \$20.00.

Southern White Creaseback. This is the Fat Horse bean, an old time variety for corn field or garden. Very hardy; grown more for dry shelled beans than for snaps. Early and prolific. Pkt. 10c, 3 pkts. 25c, lb. 35c, 2 lbs. 60c, postpaid. 15 lbs., not prepaid, \$2.90, 100 lbs. \$18.00.

Cut Short or Cornfield. Very popular throughout the South for planting in corn. Fleshy, of good quality and a prolific yielder. Pkt. 10c, 3 pkts. 25c, lb. 40c, 2 lbs. 70c, postpaid. 15 lbs., not postpaid, \$3.35, 100 lbs. \$20.00.

Lazy Wife. One of the very best Beans in our entire list; can be used either as green beans or shell beans. The pods are very long, are borne in clusters, and is an extremely heavy yielder. Pkt. 10c, 3 pkts. 25c, lb. 40c, 2 lbs. 70c, postpaid. 15 lbs., not postpaid, \$3.50, 100 lbs. \$22.00.

Carolina Sieva—Small White Lima

is the running or pole variety. It is hardy, very prolific, keeps bearing until killed by hard frost. Our special Carolina stock is superior in every way; is naturally better adapted to the entire South than the seed grown in Western arid regions by the use of irrigation. For the greatest yield of what we consider the finest beans in the world, plant this selection. Pkt. 10c, 3 pkts. 25c, lb. 40c, 2 lbs. 70c, postpaid. 15 lbs., not prepaid, \$3.50, 100 lbs. \$22.00.

Henderson Bush Lima is the bush form of the above, gives you the first beans; they are usually ready to eat in 60 days. That you will get better results from Mixson's Special South Carolina stock than from any other seed of this variety is absolutely assured. Pkt. 10c, 3 pkts. 25c, lb. 40c, 2 lbs. 70c, postpaid. 15 lbs., not prepaid, \$3.35, 100 lbs. 20.00.

Ford Hook Bush Lima. We have found to be the best large thick seeded potato bush lima for the South. It produces its first crop quickly and continues to bear. The bush is large, erect and well branched, very prolific and the beans are of good quality. Pkt. 10c, 3 pkts. 25c, lb. 50c, 2 lbs. 90c, postpaid. 15 lbs., not prepaid, \$1.50, 100 lbs. \$28.00.

Burpee Improved Bush Lima.

This is a fine selection of Lima, very prolific; the pods are large and filled with large beans of excellent quality. Pkt. 10c, 3 pkts. 25c, lb. 45c, 2 lbs. 80c, postpaid. 15 lbs., not prepaid, \$3.85, 100 lbs. \$24.00.

CAROLINA SIEVA POLE LIMA

All of Mixson's

PALMETTO BRAND

Seed are Good

Mixson's French Grown Beet Seed

EARLY ECLIPSE BEET

Culture.— Sow in rows 12 inches apart for home cultivation; cover seed one inch and firm soil, thin plants 3 inches in row; those pulled up may be transplanted or used as salad greens. Have the soil good and rich. Sow 5 lbs. per acre or 1 oz. to 50 feet of row. They will be ready in 45 to 70 days.

Eclipse. Our leading market, garden and trucker's beet. Our trucker customers buy large quantities because it is an all season quick selling selection. Well shaped, free from stringy roots, small top, fast grower; retains its blood red color after being cooked. Is extra good shipper. We have a well selected pure strain that always tops the market when shipped long distance or at home. This is a safe beet to plant. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. \$1.00, postpaid. Not prepaid, 5 lb. lots at 75c per lb.

Early Blood Turnip. An extra selected stock of Blood Turnip, having larger tops and roots than Detroit Dark Red and requiring a longer time to mature. The roots are dark red and nearly round. The flesh is deep red, zoned with lighter shade, sweet, crisp and tender. This is an excellent market and home garden sort for summer and autumn use. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. \$1.00, postpaid. Not prepaid, 5 lb. lots at 75c per lb.

Crosby's Improved Egyptian.

Good size, few small tops, very small tap rot, fine quality and, above all, quick growth. The shape is very desirable, not quite as flat as the ordinary Egyptian, nor as round as the Eclipse. Takes on its turnip shape and looks well, even in the early stages of its growth, on which account it is preferred for forcing to the Globe and Half-Long varieties. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. \$1.00, postpaid. Not prepaid, 5 lb. lots at 75c per lb.

Lentz is very popular in Florida, especially where it is largely grown for shipping. Is ready in 45 days usually. Not so much top, deep dark red color, sweet and tender. A first quality extra early shipping or home garden beet. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. \$1.00, postpaid. Not prepaid, 5 lb. lots at 75c per lb.

Swiss Chard. The Spanish and Asparagus Beet grown only for its leaves. Easily takes the place of spinach, and the big mid rib is cooked like asparagus. It is a rank fast grower. As fast as the tender leaves are clipped others grow. It is a wonderful vegetable, a necessity in every garden. This is planted by poultry raisers for their fowls because it makes such a quick rich growth, which is especially good for chickens. Pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 95c, postpaid.

GIANT RED MANGEL BEET.

Giant Red Mangel. The favorite heavy producer for stock feed. Often grows 2 feet long and ½ foot through; must be planted on rich land and will make as high as 40 tons at cost of \$6 to \$10 for seed and planting. Makes cheap high quality cow feed. Sow 6 lbs. to acre in 3 foot rows, cover seed about 1½ inches and firm the ground. When 4 inches high thin to 8 inches apart in row. Every dairyman should have an acre of these. Pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 80c, postpaid. Not prepaid, 5 lb. lots at 60c.

Improved White French Sugar. In some respects this is a better stock food than Giant Mangel, because it is sugary. It makes a yield almost as large and its sweet, rich flesh is both fattening and a big milk producer. These root foods keep the stock in fine health and are among the cheapest to produce. Culture same as Mangel. Price, pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 80c, postpaid. Not prepaid, 5 lb. lots at 60c.

Asparagus

Culture.— Soak the seed twenty-four hours in warm water. Plant in drills one foot apart, thinning out to leave the plants two inches apart. Cultivate frequently to keep the weeds down. After one or two years, transplant, putting the roots 18 inches apart each way and 5 inches deep.

Palmetto. A very early prolific variety, producing large, thick, tender spears. Pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 75c, postpaid. By express, 50c per lb. in 5 lb. lots.

Giant Argenteuil. A popular French variety, very largely grown by market garden trade. The most successful growers of this vegetable around Charleston have always preferred this variety. Pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 75c, postpaid. By express 50c per lb. in 5 lb. lots.

Asparagus Roots. You can save at least a year or two in buying the roots ready for transplanting. You will then have Asparagus one year from the setting out. Write for prices.

Cauliflower

Culture.— Does best in rich, well-tilled soil; will do well in a well manured soil. Sow in seed bed at same time as

MIXSON'S SURE CROP CAULIFLOWER

cabbage. Transplant when 3 or 4 inches high; give plenty of water in dry weather. Keep wet, hoe thoroughly and often. In Florida and along the Gulf sow seed in September, October and November. In South Carolina and upper States sow January, and February.

Early Snowball. Its dwarf habit and short outside leaves allow it to be planted very close together. An excellent early variety producing magnificent white heads of the first quality and for the market gardeners' use it is one of the most profitable. Excellent for family use. Pkt. 25c, ¼ oz. 75c, ½ oz. \$1.40, oz. \$2.50.

Extra Early Dwarf Erfurt. This Cauliflower is an extra early sort, of dwarf habit, and desirable for forcing or planting in the open ground. Pkt. 15c, ½ oz. 50c, oz. 80c.

Sure Crop Cauliflower. Cauliflower is a splendid vegetable, but many have not been successful with it because of its delicate nature. This selection is the most vigorous in every respect that we have found. If you have been unsuccessful with Cauliflower before, you need not hesitate, because this has proven successful many times where other selections have not. It will stand hot weather better and is more sure of making a crop under all conditions. You will be well pleased with the result. Pkt. 15c, ½ oz. 50c, oz. 80c.

Mixson's French Grown Carrot Seed

Culture.—Carrots being a root crop, the preparation of the soil is of prime importance. It should be well worked, thoroughly pulverized, and mellow, otherwise the Carrots will not take on their proper shape. Stable manure is not advised as fertilizer, as this will make them misshapen and forked. Arrange your rows 18 inches to 2 feet apart, and drill the seed about one ounce to a hundred feet. Eight pounds plants an acre. Cover very lightly. After they are well up, thin out to 2 inches. A fertilizer with a liberal amount of Potash is specially advised for Carrots. The best seed comes from France. We have always made our contract direct with original sources. This is one reason why Mixson's Carrots have the reputation they have.

Chantenay. Is unexcelled in productiveness or quality. It is a half-long or stump rooted variety, uniform in growth; deep golden orange color. Finely flavored. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. 90c. By express, 5 lb. lots at 75c.

Danver's Half-Long. Dark orange. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. 90c, postpaid. By express, 5 lb. lots at 75c.

Half-Long Stump Rooted. French grown seed. An early, smooth Carrot; orange colored; easily pulled. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. 90c. By express, 5 lb. lots at 75c.

Rubicon. This is a variety we have been handling only two years, but it has certainly borne out in every way what was expected of it. It is very largely planted by several of the best truck farmers in the Charleston section. It is ready in 90 days from sowing of seed; belongs to the half-long type; very small top, beautiful color. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. 90c, postpaid. By express, 5 lb. lots at 75c.

CHANTENAY

Oxheart. Fine flavored popular selection. Very short and broad; easy to pull; highly colored; rich quality. Is free from hard core; easy to grow. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. 90c. By express, 5 lb. lots at 75c.

Pride of France. French variety grown from selected stock. Stump-rooted and early. Pkt. 5c, oz. 15c, ¼ lb. 30c, lb. 90c. By express, 5 lb. lots at 75c.

Selected Long Orange Improved. One of the most desirable for either garden or field culture; it grows to large size, fair specimens averaging 12 inches in length and 3 inches in diameter at the top. All who have cattle should raise a surplus of this carrot for feeding milch cows during the winter. It increases the flow of milk and adds to the butter a delicious flavor and a rich golden color. Pkt. 5c, oz. 15c, ¼ lb. 30c, lb. 90c, postpaid. By express, 5 lb. lots at 75c.

Carrots Are Also Splendid Food For Stock

And are becoming more popular every year with our customers as they learn how easy they are to grow and the large yield per acre at low cost. The **White Belgian** has proven to be the best for the South, has produced 20 tons of roots per acre. In the Piedmont section of the South they keep well in storage, in the lower South they may be left in ground and pulled as wanted. Carrots used in connection with dry feed help keep the animal in good condition and gives a large increase of milk from dairy cows, at a low cost. For large yields of any crop the ground, of course, must be made rich with manure or commercial fertilizer. Sow in drills 3 feet apart, 4 pounds of seed per acre. When up and growing well thin out to 6 inches apart. Plant on well cultivated soil and cultivate the crop thoroughly until matured. Price of **White Belgian**, pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 80c, postpaid. By express, 5 lb. lots at 65c.

Endive

Culture.—One of the most attractive of all autumn and winter salads. Sow seed from middle of February till the last of August. When the plants are fully grown, tie all the outside leaves together, over the heart, to blanch the inner leaves, which will take about a week. Do not tie up the leaves when they are wet as they will decay. One ounce will sow 200 feet of drill.

Green Curled. Is the hardest variety and has deep green leaves, that are fine crinkled and curled. Pkt. 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25.

Gourds

Dipper Gourd. Shaped like a dipper and is used extensively for dippers. Many people much prefer to drink water out of a gourd dipper. Pkt. 5c.

Nest Egg Gourd. Looks very much like a hen egg and is used as a nest egg. Pkt. 5c.

Dish Cloth Gourd. Many women prefer a dish cloth made of this gourd to any other kind. It is always sweet and clean as long as any of it is left. Pkt. 5c.

Basket, or Sugar Trough Gourd. Good for nests, water dishes in chicken yards, etc. Pkt. 5c, 4 pkts. one of each variety, 15c.

Chervil

An aromatic plant, fine for seasoning with lettuce with salad. For Summer use sow broadcast in February or March; for Winter use sow in October or November. Pkt. 10c.

Corn Salad or Fetticus

The best variety is the Large Green Cabbaging. Used for Spring salad or garnishing. Pkt. 10c, oz. 25c.

Celeriac

Sometimes called turnip rooted celery. It is mostly used for flavoring. Cultivate very much like Celery except that it needs no hilling up. Pkt. 10c, oz. 25c, ¼ lb. 75c, lb. \$2.50, all postpaid.

Seeds of Flavoring and Medicinal Herbs

A few herbs in the garden will be found very convenient, there being so many uses to which they can be put in the green and also dry form. For winter use they should be cut just as they come into flower, tied in bunches and hung in a light, airy place indoors, where they can be available for use any time.

Anise	Pkt. .10	Lavender	Pkt. .10
Balm10	Pennyroyal15
Borage10	Sage10
Caraway10	Savory Summer10
Catnip10	Sweet Marjoram, American10
Coriander10	Thyme, Broad Leaved10
Dill10	Wormwood10
Horehound10			

Broccoli

Very much like Cauliflower, easier to grow and sure to head. If you like cabbage, you will like Broccoli better. White and Purple Cape. Pkt. 10c, ½ oz. 50c, oz. 75c.

Brussels Sprouts

Extra fine vegetable, does well everywhere in South. Very hardy, quality and flavor improved by frost. The sprouts are like miniature cabbage about one inch in diameter, growing on upright stalk. Cultivate same as cabbage. Pkt. 10c, ½ oz. 25c, oz. 40c.

Mixson's High-Grade Cabbage Seed

The Superior Cabbage Seed for the South

MIXSON'S SELECT CHARLESTON WAKEFIELD

Mixson's Select Charleston Wakefield.

This is the variety we sell far in excess of any other. This sort was originated right in Charleston County by Mr. F. W. Towles, whom we consider the dean of the cabbage growing business, and we are proud to say that we have sold Mr. Towles every year for the past ten years 400 lbs. of this variety. We think that you will agree with us that in introducing this variety Mr. Towles ought to know what a Charleston Wakefield Cabbage should be, and the fact that hebuys from us, year after year, should show beyond any doubt that we have the true strain. You can rest assured that if we hadn't, Mr. Towles wouldn't fool with it a minute because he has too much money involved to take any chances. He pays us the regular price and we have never had a complaint from his on trueness to type. Our selection is pointed headed; early; uniform in growth; and hardy. No matter if you want only a packet, it will pay you to send to us for it, because then you will be absolutely sure to get the genuine. Market gardeners also should get this strain, because you have too much money invested in your crop to run any risk you don't have to. Pkt. 10c, oz. 30c, ¼ lb. 90c, lb. \$3.25, all postpaid. Not prepaid, 5 lb. lots at \$3.00 per lb.

Mixson's Early Succession.

Among Flat sorts in our trials this variety has shown up the best and we put it out under our own name with every confidence that it will please you. We introduced it about eight years ago, and every year we sell hundreds of pounds to the truckers throughout the South. It is a very early flat cabbage, very few outside leaves, and for this reason it can be planted closer on the row than other flat varieties. It is earlier than the regular Succession—don't confuse it with that variety, because it is different. It is also slower to go to seed than most other flat varieties. If you want a flat cabbage, we know Mixson's Early Succession will fill the bill for you. Pkt. 10c, oz. 30c, ¼ lb. 85c, lb. \$3.00, all postpaid. Not prepaid, 5 lb. lots at \$2.75 per lb.

Copenhagen Market.

A variety which has become very popular in the last few years on account of the number of good qualities it combines. It is very early in maturing, and its shape is midway between the Wakefield and flat headed varieties. In other words it is roundish; it is very large and solid, with few outside leaves; quality is unexcelled. The best seed of this variety is imported from Denmark, and ours are imported direct. Pkt. 10c, oz. 35c, ¼ lb. \$1.10, lb. \$3.75, all postpaid. Not prepaid, 5 lb. lots at \$3.50 per lb.

More Cabbage Seed is sown in Charleston County than in any other county in the South, and possibly in the United States. Cabbage plants are produced by the millions. Cabbages are grown by the thousands of acres and you can rest assured that these men KNOW CABBAGE. Now see who sells them the great big majority of what they use. MIXSON. We didn't get this business overnight nor in a week, nor in one year. Years of patient work, selecting of stocks, trials, demonstrations were necessary, until the business was ours. AND WE ARE HOLDING IT EVERY YEAR. You can bet that if these men knew of any better seed they would use it. Our prices, moreover, are not the cheapest to be had; they can buy cheaper very easily, because on account of the quantity of seed used swarms of travelling salesmen from other Southern and Northern Seed Houses try to get the business and offer them every inducement except better seed.

Now, you are entitled to the best, just as much as these men are. The few rows you plant in your garden do not amount to much in dollars and cents, possibly, but still there is no need for you to plant anything but the best, because you can get it mighty easily from us. The seed we sell every year will under a conservative estimate produce TWELVE MILLION CRATES OF CABBAGE, and the concern who puts out this much seed every year, to the same people, can certainly handle your order. If you are a market gardener there is all the more reason to use Mixson's Cabbage Seed. Planting an acreage in cabbage entails a great deal of expense in labor, fertilizer, etc. Buy CABBAGE CROP INSURANCE by buying your Seed from us.

Culture.—For very early Cabbage, sow seed in boxes, and keep sheltered and covered in very cold weather. After danger of heavy freezes is over, sow in beds in drills about 4 inches apart, sowing the seed very thinly, about ¼ inch apart. You do not want the plants too close together, as this makes them spindly. Stocky plants are what you want, and if they come up too thick thin out. It is almost impossible to give Cabbage too much fertilizer. The best truck farms in the Megeets, S. C., section use one containing 7% phosphoric acid; 8% nitrogen; 5% potash. When they start to head it might be advisable to side dress with Nitrate of Soda. About 17,000 plants are required to plant an acre and about 6 ounces of seed should under favorable conditions produce this many plants.

Early Jersey Wakefield. A little earlier than our Charleston, but heads are smaller. Can be planted closer than the Charleston. Pkt. 10c, oz. 30c, ¼ lb. 90c, lb. \$3.25, all postpaid. Not prepaid, 5 lb. lots at \$3.00 per lb.

Select Large Late Flat Dutch. This is a favorite flat variety and one that can be depended on for general planting throughout the South. It is late in maturing, and is therefore specially adapted to heading during the summer. It makes a tremendous head, withstands bad weather better than most varieties. If you want the genuine Late Flat Dutch, we are sure that our select strain of this variety will please you. Pkt. 10c, oz. 25c, ¼ lb. 75c, lb. \$2.75, all postpaid. Not prepaid, 5 lb. lots at \$2.50 per lb.

MIXSON'S EARLY SUCCESSION

SELECT LARGE LATE FLAT DUTCH

Sure Head. A very large, late heading variety, one that produces a tremendous crop. If a succession of Cabbage is wanted, plant Mixson's select Charleston Wakefield for first early; then Mixson's Early Succession to come in next, and then this select strain of Sure Head to come in last. This is an extremely vigorous growing sort, standing to a remarkable extent extremes of both heat and cold. Pkt. 10c, oz. 25c, ¼ lb. 75c, lb. \$2.75, all postpaid. Not prepaid, 5 lb. lots at \$2.50 per lb.

Early Short Stem Flat Dutch. A very popular variety, one that you no doubt know, and if you want to plant it again, we have the genuine stock. It is early in maturing, coming in between Mixson's Early Succession and Select Large Late Flat Dutch. Makes a solid compact head, with few outside leaves. A short stem variety, very often sold to our trucking trade. Pkt. 10c, oz. 25c, ¼ lb. 75c, lb. \$2.75, all postpaid. Not prepaid, 5 lb. lots at \$2.50 per lb.

Early Summer. A variety principally used for summer or fall planting. Medium early, flat head, large. Pkt. 10c, oz. 25c, ¼ lb. 75c, lb. \$2.75, all postpaid. Not prepaid, 5 lb. lots at \$2.50 per lb.

Other Varieties of Cabbage

We can supply also the following well known varieties of Cabbage. The same attention is given to the growing of these stocks as the ones quoted, but lack of space forbids us to describe them fully: Early Winnigstadt, Early York, All Head Early, Solid South, Large Late Flat Dutch, Florida, Header, Drumhead, All Seasons, Autumn King, Late Succession (regular strain). Pkt. 10c, oz. 25c, ¼ lb. 75c, lb. \$2.75, all postpaid. Not prepaid, 5 lb. lots at \$2.50 per lb.

For Cabbage Plant Prices See Page 17

Chinese or Celery Cabbage

This is a new introduction of exceptional merit. We make a rule to stay away from new-fangled introductions until they have proved worth while, and now that this one has, we are cataloging it the second year. Low, moist soil is best suited to it. It should be planted like Cabbage as far as cultivation goes in the early stages. In order to get crisp tender leaves, however, the plants should be banked, or the tops tied together. It is eaten like Lettuce, and is equally if not more delicious. It can also be cut up fine like Cabbage in cold slaw. It is a very quick growing crop, and is now very extensively grown in Florida and California, though there is no reason why it should not succeed in most sections of the South. We sold seed last season over the entire South and we believe that the crops were generally above expectations. If you have not grown any before, try some this season, and we believe that you will find it time and money well spent. We get our seed from original sources, not depending on other dealers, and are confident that they are the best to be had. Pkt. 10c, oz. 30c, ¼ lb. 85c, lb. \$3.00, all postpaid.

Collard

It is hardly necessary for us to say anything about Collard in a Southern Seed Catalog going principally to Southern farmers. Every one knows it, though we believe that very few of us fully appreciate the feeding value of Collards. For boiling for "greens" it has no superior and few equals. They can be planted almost any time during the Spring and Summer, and should be transplanted and worked like Cabbage. Few crops in the South give better results for the time and money spent on them than do Collard patches.

True Long Georgia. The old-time Southern favorite Collard. It stands all kinds of hard treatment and neglect with little injury, and is a sure cropper in the South. Can be grown on land so poor cabbage won't head on it, and furnishes a plentiful supply of leaves of good quality. Pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 90c, postpaid. 5 lb. lots at 75c per lb., not prepaid.

N. C. White Buncombe. Has its origin in North Carolina. Closely resembles the Improved White Georgia in many respects except that the leaves are dark green. Very hardy, not affected by bugs or worms. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. \$1.00, postpaid. 5 lb. lots at 85c per lb., not prepaid.

Improved White Georgia. Also called Cabbage Collard on account of its close bunching growth and light green leaves, resembling the cabbage—combining the hardness of the collard with the whiteness and crispness of cabbage. You will never know how good collards are until you try our Improved White Georgia. Pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 90c, postpaid. 5 lb. lots at 75c per lb., not prepaid.

Celery

This valuable crop in sections not ordinarily subject to extreme cold during the winter, should be sown in August and September, in shaded beds, covering seed not over half an inch. Transplant to open ground when 6 inches high. Handled in this way it should be ready for market

next March and April. It will not mature in mid summer in South. In the upper or middle South sow in May and June. It will then mature in cool fall months. It does best on rich loamy and mucky soil, and may

be grown on red land that is rich and full of humus. It is grown successfully in home gardens from Michigan to the Gulf. Give the crop a trial this year. 1 oz. will produce 2,000 plants.

Golden Self Blanching

Is the variety for market gardeners. Only French grown seed should be sown. We have a limited supply from the originators. Pkt. 15c, ½ oz. 35c, oz. 65c, ¼ lb. \$2.00, lb. \$7.00, all postpaid.

Improved White Plume and Giant

Pascal. Are sections of good quality adapted to our conditions and will make fine, crisp, highly flavored celery when well fertilized and cultivated. They blanch easily when mature and will prove highly satisfactory. Price, pkt. 10c, oz. 20c, ¼ lb. 65c, lb. \$2.25, all postpaid.

WHITE PLUME CELERY

Celeraic or turnip rooted celery. It is mostly used for flavoring. Cultivate the same as Celery except that it requires no hilling up. Pkt. 10c, oz. 25c, ¼ lb. 90c.

Mixson's High-Grade Cantaloupes

Culture. Melons thrive best in a light, rich soil. Plant early, when the ground has become warm and dry, in hills 5 to 6 feet apart each way. Previous to sowing seed, mix a few shovelfuls of well-rotted manure in each hill, and plant in each 12 to 15 seeds, and after all danger of frost is over, thin out to three or four plants per hill. A few hills for early use may be had by sowing on pieces of sod in a hotbed, and when warm enough, transplant to open ground. Melon vines are subject to the same destructive insects and fungus foes as are cucumbers and squash vines. Early and repeated spraying with Arsenate of Lead Mixture is always advisable for these crops. One ounce will plant about 50 hills; 2 to 3 lbs. in hills per acre.

Special Gold Lined Rocky Ford. This is an improvement on the old Rocky Ford and is fast becoming the most popular muskmelon wherever it is known. It is completely netted all over and shows no inclination of ribbing and is uniform in size and shape and has no slicks. The illustration on this page is from a photograph of an average size melon. Vines are heavy and bear abundantly throughout the season. The ripe melon has a silver colored face-like veiling over it. Meat is rich green with a beautiful gold lining and can be eaten very close to the rind. The small seed cavity, the deep and being very solid makes it a good long distance shipper. When ordering be sure to mention "Special Gold Lined" Rocky Ford. Pkt. 10c, oz. 15c, ¼ lb. 50c, lb. \$1.75, postpaid. Not prepaid, \$1.50 per lb. in 5 lb. lots.

Rocky Ford. It is safe to say that no melon has ever been so popular in the large city markets and has sold so readily at such high prices as the Rocky Ford. It is just the right size to serve in halves, and this fact, together with its delicious flavor, make it ideal for that purpose. Very attractive in appearance. The vines are exceedingly healthy and vigorous, bearing an abundant supply of fruit during the entire season. The green flesh is deep and very solid. The seed cavity is very small. The average weight is about one and a half pounds. Our price is very low for the quality of the seed we offer. Write for special prices in large quantities. Pkt. 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25, postpaid. 5 pounds or more by express, not prepaid, at \$1.00 per pound.

Banana. This is a long slender melon, growing from one to two feet in length and four to six inches in diameter. Skin is creamy white, with very firm meat of deep salmon color. Has a most pleasing flavor like a banana. It is grown extensively for home garden use. We can not recommend this variety as a shipper, because melons are very long and would be easily broken. We believe that our strain of banana muskmelon is the very best on the market, and are sure that you will not make a mistake by planting a patch of this variety. Pkt. 10c, oz. 15c, ¼ lb. 45c, lb. \$1.50, postpaid. Not prepaid, \$1.25 per lb. in 5 lb. lots.

Netted Gem. An excellent small melon, very popular with melon growers. Finely netted and looks nice in the market. Flesh green and particularly rich and juicy. This is the parent variety of the Rocky Ford type of melons and is grown in preference to the more recent strains in many parts of the country. Our stock is from one of the best growers in the country, and will please our customers with its fine flavor. Pkt. 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25, postpaid. By express, not prepaid, at \$1.00 per lb.

Extra Early Hanover. Is unquestionably the earliest cantaloupe. While being extra early in maturity, it also makes a good-sized melon, averaging considerably larger than the Netted Gem. It is round in shape, slightly flattened at the ends, and a fine shipping and market melon. Wherever it has been grown it has become very popular and the demand for seed has increased rapidly each year. Pkt. 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25, postpaid. 5 lbs. or more, by express, not prepaid, at \$1.00 per lb.

Extra Early Hackensack. Fruit attains a good size, weighing four to six pounds each. The melons are round, heavily ribbed; skin is green and thickly netted; flesh is light green, of delicious flavor, rich and sugary; it is also a luxuriant, healthy grower and exceedingly productive. This is the earliest of all netted melons. Pkt. 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25, postpaid. 5 pounds or more by express, not prepaid, at \$1.00 per lb.

GOLD LINED ROCKY FORD CANTALOUPE

Eden Gem. Is the popular, round, heavily netted, highly flavored cantaloupe planted everywhere for home use, shipping or home market. It is very early, each vine makes a big crop of saleable melons; it is more resistant to rust, insects and all plant troubles, than any other selection. We have the most carefully selected stock of seed that can be produced. You can depend on it absolutely for a crop of any size. Pkt. 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25, postpaid. 5 lbs. at \$1.00 not prepaid.

ROCKY FORD CANTALOUPE

Nixon

It is a Southern bred, very large cantaloupe, sometimes weighing 15 lbs. The quality is extra good, the flavor is perfect. It bears heavily and is thoroughly adapted to the South. Pkt. 10c, oz. 15c, ¼ lb. 5c, lb. \$1.50, postpaid. Not prepaid, \$1.25 in 5 lb. lots.

Knight Extra Early.

This melon is excellent for shipping, as it is very solid and can therefore stand handling better than many other sorts. It also packs in a crate well, being of uniform size. It is slightly oblong, ribbed, and well netted. Its flesh is of excellent quality, sweet and juicy green, and of excellent appearance. Pkt. 10c, oz. 15c, ¼ lb. 50c, lb. \$1.75, all post paid. Not prepaid, 5 lb. lots and over, \$1.50 per lb.

Sweet Martha or Fordhook.

Is a delicious little cantaloupe that is getting better known in the South every year. It is a fine home garden or local market melon, very prolific, strong, health growing, long bearing, a melon that pleases every one. It is easy to sell and on account of its just-right size and extra heavy yield it makes a profitable melon for home market. The meat is a highly colored salmon pink with a rich sweet flavor. You will be sure to like it. Pkt. 10c, oz. 15c, ¼ lb. 45c, lb. \$1.50, all postpaid. Not prepaid, \$1.25 per lb. in 5 lb. lots.

Honey Dew.

This is a comparatively new introduction, but one that made good mend to our many friends. It is on the Casaba type of melon, which are grown in quantities in California. It grows to good size, melons sometimes weighing eight to ten pounds each. Skin is creamy white, smooth, and rind is thin but tough. The flesh is light green in color, and of a delicious spicy flavor. Be sure you let it get fully ripe before eating. Pkt. 10c, oz. 20c, ¼ lb. 65c, lb. \$2.50, all postpaid. Not prepaid, 5 lb. lots and over \$2.25 per lb.

EXTRA EARLY HANOVER CANTALOUPE

Mixson's Sugar and Garden Corn

ADAMS LARGE EARLY

Culture.—Some of the varieties listed below are sugar or sweet varieties. The grains are shriveled and are very tender so that they cannot be planted quite as early as the others. We will denote these by a (S) after the variety name. Make the hills $2\frac{1}{2}$ to 3 feet apart each way, depending on the variety, thinning out to 2 stalks to the hill. Corn should be planted in succession in order to have a tender supply all the time. A fresh supply can also be had if you plant an early, a medium, and a late variety at the same time, one maturing after the other. Garden Corn is very easy to grow, and this crop is one very often neglected in our Southern gardens.

Early Adams. This is a very early variety, fairly large ears for so early a Corn. Not a Sweet Corn, but is of very good quality. Stalks are very dwarf, and it can therefore be planted very closely together. Pkt. 10c, lb. 30c, 2 lbs. 50c, all postpaid. By express, 10 lbs. 11c per lb.

Golden Bantam (S). The earliest sweet or sugar Corn we list. It of Corn is the very best, flavor is delicious, and you will be sure to like it. Very small growth and can therefore be planted very closely together. Should be in every garden. We are mighty pleased with it at Ferndale, and are always glad when Golden Bantam comes in. Pkt. 10c, lb. 35c, 2 lbs. 60c, all postpaid. By express, 10 lb. lots 20c per lb.

Country Gentleman (S). Quality of the very finest, and by many for intermediate crop. Not near as early as the Golden Bantam, but the ears are much larger. Grains are long and deep, and very shriveled. Makes 2 to 3 ears to the stalk. Pkt. 10c, lb. 35c, 2 lbs. 60c, all postpaid. By express, 10 lbs. lots 18c per lb.

Stowell Evergreen (S). This variety has long since been a favorite in the South and is just as popular now as it has ever been. Ears are large, 2 to 3 to the stalk, and quality is good. Grains are deep and sweet, and remains in condition longer than any other sugar corn. The best main crop variety in the sweet corn class. Pkt. 10c, lb. 30c, 2 lbs. 50c, all postpaid. By express in 10 lb. lots 17c per lb.

Mixson's Early Giant (S). The ears of this variety are unusually early too. They are well filled, and the grains are long, close together and juicy. A variety to which we put our name several years ago, and for which the demand is increasing all the time. Pkt. 10c, lb. 30c, 2 lbs. 50c, all postpaid. By express, 10 lb. lots 17c per lb.

Truckers Favorite. Not a sugar corn, but certainly a most desirable variety for early roasting ears. As a second early corn to come in after Adams Early or Golden Bantam, or as a corn to be planted late for quick maturity, it has a distinct place. White corn, white cob, well filled, sweet and tender. Pkt. 10c, lb. 30c, 2 lbs. 50c, all postpaid. By express, 10 lb. lots 11c per lb.

Snowflake. Our tests on Ferndale has shown us that this is a most desirable variety. It is not a sweet corn; is not as early as either Adams or Country Gentleman, but as a variety to come in after them, it has no equal. The size of the ear is much larger than either of the two just mentioned, while the quality is just as good. For planting in a succession, or where an especially early corn is not desired, use Snowflake and you won't be disappointed. Pkt. 10c, lb. 25c, 2 lbs. 40c, all postpaid. By express, 10 lb. lots 10c per lb.

Early White Dent. This is strictly speaking a field variety of corn, but it is very early in maturing, and for this reason is very often used for roasting ear purposes. It matures about two weeks after Snowflake. Bears one to two good

ears to the stalk. This variety is described also in the Field Corn section of this Catalog. Pkt. 10c, lb. 25c, 2 lbs. 40c, all postpaid. By express, 10 lb. lots at 9c per lb.

White Rice Pop Corn. A fine variety, clear white and very productive. Pops beautifully. Crisp, large and white. Pkt. 10c, lb. 30c, postpaid. Ask for quantity prices.

Golden Beauty Pop Corn. A variety which for extreme earliness, great productiveness, crispness, sweetness and depth of grain and smallness of cob can not be excelled. It pops splendidly and matures four months from time it is planted. Pkt. 10c, lb. 30c. Ask for quantity prices.

COUNTRY GENTLEMAN

MIXSON'S IMPROVED SPINELESS

Parsley

Culture.— Used for garnishing and seasoning soups, meats, etc. Succeeds best in a mellow, rich soil. Sow thickly early in April in rows 1 foot apart and 1/2-inch deep; thin out plants to stand 6 inches apart in the rows. The seed is slow of germination, taking from three to four weeks to make its appearance, and often failing to come up in dry weather. To assist its coming up quicker, soak the seed a few hours in warm water. One ounce of seed for 150 feet of drill, 5 to 6 pounds for an acre.

Double Moss Curled. The most ornamental of all the curled varieties and a favorite in the home garden as well as being used exclusively by market gardeners to supply our hotels and markets. It is easily grown and should be in every garden. Pkt. 5c, oz. 15c, 1/4 lb. 40c, lb. \$1.50, postpaid.

KOHL-RABI

Kohl-Rabi

In growth this is half way between cabbage and turnip; the edible portion is the large bulb which forms at the stem above the soil. By making successive sowings, tender bulbs may be had throughout the summer and fall, and are highly esteemed for their mild, delicate, cabbage-like flavor. For table use the bulbs should be gathered while the skin is still tender; boiled, sliced, and the hard lower portion discarded. The plants are quite hardy and seed may be sown in drills as early as the ground can be worked in good condition. When started the plants can be set out like cabbages, six to ten inches apart in the row. The best variety is the Early White Vienna and price is as follows: pkt. 10c, oz. 25c, 1/4 lb. 90c.

Mixson's Egg Plants

Our Egg Plant seed is sold very largely to Southern truckers, who grow for early Northern markets. To these men quality of seed is the very first consideration. Our seed has always given satisfaction, resulting in an increasing business every year. You can get no better than Mixson's

Culture.— In order to get started early, sow in a hot bed early, about February 15. Egg Plants are strictly warm weather plants, and the seed will not germinate if the ground is too cold. When all danger of frost is past, and the plants have four leaves, transplant to open ground, setting the plants three feet apart each way. Have the ground well fertilized, using well rotted stable manure, and cultivate often to keep down grass and weeds. A packet of seed will be enough for a small family garden; to plant an acre, 1/2 lb. will be required to give sufficient plants.

Mixson's Improved Spineless. This is a variety we have been selling to the truckers and market gardeners around Charleston for years, and the ones who know it best like it best. It gives good uniform smooth fruit of deep purple color. This variety is free from spines than any other variety we know. Pkt. 10c, 1/2 oz. 30c, oz. 50c, 1/4 lb. \$1.65, lb. \$5.50, all postpaid.

New York Improved Purple. This is perhaps the most generally known variety that is listed, and it is a standard sort over the entire South. The plants are strong and vigorous. We sell this variety very largely to Southern truckers who make a specialty of growing for early market, and these men as you demand the best. It is an early variety producing smooth, purple fruit, and we are sure that our variety is unexcelled by that of any one else. Pkt. 10c, 1/2 oz. 30c, oz. 50c, 1/4 lb. \$1.65, lb. \$5.50, all postpaid.

Florida High Bush. This is a strong, vigorous high growing variety bearing its fruits higher off the ground than the other varieties and for this reason they are less liable to blight or rot. It is becoming more popular every year. For home gardens it is a very desirable sort. Pkt. 10c, 1/2 oz. 25c, oz. 40c, 1/4 lb. \$1.30, lb. \$4.50, all postpaid.

Kale, or Borecole

Culture.— Sow in 18-inch drills from September till November. May also be sown in February. Protect with straw in very severe weather. Excellent for greens. Four pounds will plant an acre. One ounce for 200 feet of drill.

Dwarf Curled Siberian. The standard winter variety. Leaves bright green, curled and very delicate. Pkt. 5c, oz. 20c, 1/4 lb. 65c, lb. \$2.25, postpaid.

Dwarf Green Curled Scotch. Largely used in the Norfolk district. Leaves green, beautifully curled. Pkt. 5c, oz. 20c, 1/4 lb. 65c. (One ounce for 200 feet of drill, 5 to 6 lbs. for an acre.)

Parsnip

Large Sugar, or Hollow Crown. The best variety. roots long, very smooth, white, tender, sugary, and of excellent flavor. This strain was made by careful selection of roots having the distinct hollow crown. Pkt. 10c, oz. 15c, 1/4 lb. 40c, lb. \$1.50, postpaid.

One ounce will sow about 100 feet of drill.

Leek

Culture.— Sow the seed very early in a seedbed in a sheltered place, if possible. When plants are about 6 inches long transplant them to trenches 5 inches deep, with very rich soil at the bottom. Fill up the trenches as the plants grow, and later draw soil up to them. As a result you will have fine, large Leeks blanched half foot long, which may be kept all winter if dug up with the roots and stored in moist sand in the cellar.

Large Americian Flag. The largest and most desirable either for market or family use. Pkt. 10c, oz. 25c, 1/4 lb. 50c.

Raffia—For Tying Plants or Vegetables

Better to use than twine or thread as Raffia does not cut, yet it is very strong and economical. We buy the very best grade we can, the strands being long, broad, and strong. Per lb. 40c, 3 lbs. 80c, both postpaid; 10 lb. lots, not prepaid, at 20c per lb. Write for prices in larger quantity. We import direct from the original sources of supply.

Cucumbers

The Cucumber is one of our special lines and we probably sell more Cucumber seed in South Carolina than all other firms sell in the State. As we sell year after year to the largest truckers such a quantity of

seed, it is very evident that we are producing and selling the very highest quality. This is true and you will be highly satisfied with our extra good Cucumber seed.

Culture. Plant in the open as soon as weather permits; four feet apart each way, thinning out to four plants after they are well up. Fertilize with well-rotted stable manure. One ounce plants fifty hills; 2 to 3 pounds to the acre. To have them very early, start in pots or paper boxes indoors, and then transplant to the open as soon as weather will permit, taking care to check the growth as little as possible.

MIXSON'S WHITE SPINE CUCUMBER

Mixon's Improved White Spine. Our best strain for main crop. Early, green and prolific. A favorite with market and private gardeners. Packet 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25, postpaid. 5 lb. lots and over, by express, at \$1.00 per lb.

Arlington White Spine. A popular variety with truckers. It is excellent in shape, color and shipping qualities. Pkt. 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25, postpaid; lb., by express, \$1.00.

Early Fortune. This is one of our biggest sellers, and the stock we have has shown up to be unsurpassed for long distance shipments. Our stock produces strong, healthy, prolific plants, giving the heaviest yield per acre known in this section. If you want Early Fortune that you can depend on, send us your order. Pkt. 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25. 5 lb. lots and over, by express, at \$1.00.

Improved Long Green. An old-time favorite; fruits extra long and of good size, holding their dark green color until well matured. Crisp, tender and free from bitterness; fine for slicing. When 3 to 4 inches long they make an especially fine pickling cucumber. Good for planting at all seasons from early spring to late summer. Packet 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25, postpaid. 5 lb. lots and over, by express, at \$1.00.

Davis' Perfect Cucumber. An almost ideal cucumber for shipping; of deep dark green color, uniform in size. Davis' Perfect is a favorite with shippers in many parts of Florida and Texas. It is almost seedless 1-3 of its length from the stem, and all of its seeds when in slicing condition are so very small and tender they are almost unnoticeable. A very prolific variety. Packet 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25, postpaid. 5 lb. lots and over, by express, at \$1.00.

Gherkins. Small fruited, 2 to 3 inches long, well rounded and covered with small spines. For pickling only. Pkt. 10c, oz. 20c, ¼ lb. 75c, lb. \$2.50, postpaid. 5 lb. lots and over, by express, at \$2.25.

Great Everbearing Cucumber. This variety is entirely distinct from all others on account of its close, bushy growth and everbearing character as shown in our illustration. The first cucumbers are ready very early and the vines continue to flower and produce fruit continually until late in the season, whether the ripe cucumbers are picked off or not, differing in this respect from all other varieties of cucumbers in cultivation. A single vine will show at the same time cucumbers in every stage of growth, the smaller ones being perfect in shape, of a fine green color, just the right size for pickling. As they grow larger they are entirely satisfactory as a slicing cucumber. Packet 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25, postpaid. 5 lb. lots and over, by express, at \$1.00.

A SINGLE PLANT OF EVERBEARING CUCUMBER

Southern Pickle. Is a regular pickle cuke to grow only for picklers and is perfect for this purpose. Very prolific. Pkt. 10c, oz. 15c, ¼ lb. 40c, lb. \$1.25, postpaid.

Japanese Climbing Cucumber. Young plants are bushy but as soon as they are well established begin to throw out runners and climb, so may be grown on fences, poles or trellises thus saving much valuable space in small gardens. Fruits 10 to 12 inches in length, of fine green color; flesh is thick and firm, never bitter, a superb variety for slicing. When young makes fine pickles. Very prolific, fruits are raised above the ground so seldom suffer from wet weather or insects. Vines are almost mildew-proof and continue in bearing until late in the season. Packet, 10c; ounce, 15c ¼ lb. 50c; lb. \$1.75, postpaid.

Mixson's Select Stocks of Lettuce Seed

IMPROVED BIG BOSTON

Improved Big Boston. This is without doubt the most popular variety of Lettuce for planting through the South, and for general use we do not think that there is any variety superior to it. It is a sure header, leaves forming compactly and the head is round. On account of the great extent to which this variety is planted there are any number of indiscriminate stocks of Big Boston sold, but we are safe in saying that there is none better than ours. The major portion of our sales is to Market Gardeners, and these men demand and get the very best. If you are growing Lettuce for market we feel sure that you will be pleased with the high quality of this stock, and if you are growing only for your own private garden the best certainly is none too good for you. The strain which we have is regular in growth, slow to seed, and heads firm with hearts well blanched, crisp and tender. Pkt. 5c, oz. 15c, ¼ lb. 40c, lb. \$1.25, all prepaid.

California Cream Butter. A very hardy variety, standing heat well, the quality is one of the very best, and is very largely used for shipping purposes. Pkt. 5c, oz. 15c, ¼ lb. 40c, lb. \$1.25, all prepaid.

Mixson's Cabbage. This selection makes an extremely solid head very large in size. It is an especially good variety for shipping as it keeps in good condition better than any variety we know of. Heads are compact and large, and it is a very slow seeder. It is a variety that we have been selling for several years to supply to the Market Garden Trade, and we feel sure that you will be well pleased with it on account of the number of good qualities which it combines. Pkt. 5c, oz. 15c, ¼ lb. 40c, lb. \$1.25, all prepaid.

Improved Hanson. This is one of the best varieties that we list for summer as it withstands heat exceptionally well, makes a large head of good quality, exceedingly crisp and very tender. It blanches well and is slow in shooting to seed. Pkt. 5c, oz. 15c, ¼ lb. 40c, lb. \$1.25, all prepaid.

Romaine or Cos Lettuce. This is a distinctive type of Lettuce which is getting more popular every year. It makes the largest growth of any variety, the heads being large and conical. Tying up will cause the inside leaves to blanch better and be extremely crisp. This variety is becoming more popular every year for shipping, and is equally desirable for Home Garden. If you have never grown any of this sort plant a little this year and we think that we are safe in saying that you will be well pleased with the results. Pkt. 5c, oz. 15c, ¼ lb. 40c, lb. \$1.25, all prepaid.

High Quality Seed is the first essential to a good crop of Lettuce. There is none better than Mixson's.

The production of MARK GARDNERS' stock of lettuce seed has received for a number of years our most careful attention. We give special care to the production of these well known, standard varieties of proven value. Our special stocks have been developed and selected with the greatest care and they are, without exception, the most perfect in results that any most critical grower could desire. We produce this seed in California and France under expert supervision. Seed of BETTER quality has NOT YET been grown. You will certainly be pleased and satisfied with any of our varieties.

Culture.—For very early Lettuce sowing in a hot bed or in a box indoors. Do not get the plants too close together, as this will make them spindly. If too close pull some. When large enough transplant to well rooted plants to 12 inch foot rows, setting the plants twelve inches apart in well worked soil. Sowings may also be made in open ground early in the spring, and the plants thinned out. For fall use sow in August, September and October. One ounce will produce about twelve hundred plants.

May King. This is one of the best all around varieties of Lettuce that we know of. It makes a larger head than Boston, and the leaves are firmly folded. It is an extremely early variety and is used very largely for forcing, although it is a desirable sort also for growing out doors. Pkt. 5c, oz. 15c, ¼ lb. 40c, lb. \$1.25, all prepaid.

Mixson's Charleston Market. This is the variety of our own introduction, and it has been making friends for us for several years. It is more or less of the same habit of growth as the Big Boston, and quality just as good if not better. There is certainly no head Lettuce on market, that we know of, that is superior to it, for home garden market. As you know a good many varieties of Lettuce do not withstand heat, but this variety does better than any variety that we know. It keeps crisp late in the season and shows up fine for market with beautiful shade of green and perfect formed head always attract special attention making it a quick seller. Pkt. 5c, oz. 15c, ¼ lb. 40c, lb. \$1.25, all prepaid.

ROMAINE, OR COS LETTUCE

Mixson's High-Grade Watermelon Seed

Watermelon Seed is one of the most important classes of seeds in the South, yet the supply of really high-grade, pure-bred seed is surprisingly small as compared with the large quantity sold. We have given special attention to developing the best varieties for shipping and home use, realizing especially the great need for purer and better selections of the popular shipping varieties. We have been growing and improving these shipping varieties for a number of years, under ideal conditions for keeping each variety pure. We have not only been fortunate in improving the purity, but

have produced strains that have unusual vigor and vitality. The crops that our seed have produced show the largest percentage of first-class saleable shipping and home market melons.

There can be no doubt but that it will pay you to plant your entire crop in our High-Grade Southern Seed. In Texas, Oklahoma, Arkansas, North and South Carolina, Florida, in every part of the South our seed has given the most satisfactory results. **You will protect yourself from failure when you plant this seed.**

WATSON WATERMELON.

The Genuine Watson Melon is what we have and you will be perfectly satisfied with this seed in every way. High germination of seed, strong healthy vines, well formed, true type melons, the finest quality that we have seen of this variety for shipping or home market; thin, tough rind, meat red and sugar sweet. We think this is the finest stock of Watson melon ever offered. Pkt. 10c, oz. 15c, ¼ lb. 35c, lb. \$1.00, postpaid. By express, 5 lb. lots at 80c per lb.

Genuine Augusta Rattlesnake is everywhere known as "the melon that made Georgia Famous." There is a great difference in common Georgia Rattlesnake and this selection. Our genuine stock produces the largest, finest looking melons, with the sweetest, reddest meat. This is perfection of the Rattlesnake type. Pkt. 10c, oz. 15c, ¼ lb. 35c, lb. \$1.00, postpaid. By express, 5 lb. lots at 80c per lb.

Florida Favorite. The popular Extra Early shipping melon, long, dark green, rind striped with lighter green. This is a melon of fine appearance, is true to type, very prolific, has strong, vigorous vines; a sure crop variety. Always in demand. Pkt. 10c, oz. 15c, ¼ lb. 35c, lb. \$1.00, postpaid. By express, 5 lb. lots at 80c per lb.

Carolina Bradford. This is a melon of unusual quality for home use and should be in every melon crop. Do not fail to plant some of this variety this year. It seems peculiarly adapted to South Carolina and always gives the greatest satisfaction here. This is a medium long green, with white seed, honey sweet brittle red meat. Pkt. 10c, oz. 15c, ¼ lb. 35c, lb. \$1.00, postpaid. By express, 5 lb. lots at 80c per lb.

Jones. This is the big, round, green rind jumbo melon which sometimes grows to be 80 or a 100 lb. It is the best large round melon. Pkt. 10c, oz. 15c, ¼ lb. 35c, lb. \$1.00, postpaid. By express, 5 lb. lots at 80c per lb.

Alabama Sweet. This excellent shipping melon is the leading sort grown by Texas and other Southern melon growers' associations and individual growers. The rind is dark green, marked with a still darker green mottled stripe, and while thin is very tough, making the melon a first-class shipper. The flesh is bright red, fine grained, sweet and luscious, entirely stringless and very firm. The seeds are white, slightly tipped with brown, and are firmly set in small cavities near the rind. Pkt. 10c, oz. 15c, ¼ lb. 35c, lb. \$1.00, postpaid. By express, 5 lb. lots at 80c per lb.

Irish Grey. A new and distinct variety, produces more good merchantable melons per acre than any other variety and quality is all that could be desired. The sparkling red meat is very sweet and free from stringiness, crisp and compact. Ripens earlier than Watson, more prolific, does not blister, stands long distance shipping, rind is grey. A very valuable melon in every way. Pkt. 10c, oz. 15c, ¼ lb. 35c, lb. \$1.00. By express, 5 lb. lots at 80c per lb.

Kleckley Sweet. This splendid and most sweet watermelon has certainly become very popular wherever it has been thoroughly tested. It is of superb, luscious flavor. While the skin is perhaps too thin to permit of the melons being shipped very great distances to market, it is most desirable to plant for home use, or local markets. The melons themselves are very large, oblong in form, with dark green skin, the rind, which is very brittle. Flesh bright scarlet, with solid heart, delicious crisp, sugary and splendid in every way. The melons average 18 to 20 inches in length, by 10 to 12 inches in diameter; of handsome appearance; ripens early, and is most desirable for the home garden. Pkt. 10c, oz. 15c, ¼ lb. 35c, lb. \$1.00, postpaid. By express, 5 lb. lots at 80c per lb.

Halbert Honey. Is a record-breaker for sweetness and its crisp, red meat is free from stringiness. It is strictly a home and near market melon. On account of its extra sweetness, uniform shape and fine appearance, it is growing more popular every year. It is long with dark green rind, grows to large size and makes an unusually big crop. Pkt. 10c, oz. 15c, ¼ lb. 35c, lb. \$1.00, postpaid. By express, 5 lb. lots at 80c per lb.

A Good Garden Will Be At Least Your Best Investment this Spring

At this time, when it is rather difficult to move cash crops at anything like a proper price, it behooves us to keep as much money on the Farm as we can. A good garden will do this. We don't know of a single crop that will yield as big returns in proportion to money and time spent as will a garden intelligently planned, carefully worked and the products used either as fresh vegetables, canned, or dried.

Mixson's Reliable Onions

Culture.—The cheapest way to grow onions is from the seed, which should be planted just as soon as the ground can be worked and well prepared in the spring. The soil should be perfectly pulverized and heavily fertilized, and the crop must be frequently cultivated. Sow 1 oz. of seed to 200 feet of row, 4 lbs. to acre. Crop will mature in 100 to 145 days depending on variety. A quicker crop of Onions can be secured by planting Sets, and this is also a surer method. Three to four weeks can be saved. 1½ lbs. of sets will plant 100 feet of row.

Mixson's Southern Prizetaker. Is a selection that will always give satisfaction. Under very favorable conditions it grows to an enormous size, sometimes weighing 5 pounds. The quality is good. You can always depend on it for a sure crop. The outer skin is straw brown, the inside snow white, fine grain, mild flavor. You will like it. Pkt. 10c, ½ oz. 15c, oz. 25c, ¼ lb. 75c, lb. \$2.50.

Mixson's Southern Red Globe. The quality and size is ideal. Crisp, fine-grained and not too strong. They are fine for home garden and sell quickly on the market because of their fine appearance. Pkt. 10c, ½ oz. 15c, oz. 25c, ¼ lb. \$1.00, lb. \$3.50.

Bermuda—Yellow, Crystal Wax, Red. This famous class of onions is considered the best of all for early market and for the most perfect quality. It is a great money maker on the Gulf and Atlantic seaboard for a winter crop. The seed is best planted October 1st. It is also a quick maturing onion for spring planting. This is the sweetest and mildest flavored of all onions; it is considered the leader for quality. The Crystal White comes first for quality, then Yellow, which is the longest keeper and best shipper. The Red is equal to the Yellow and preferred by many because of its color. Under the skin they are pure white. This is an onion that should be in every garden.

Price	Pkt.	½ oz.	oz.	¼ lb.	lb.
Bermuda Yellow10	.25	.45	\$1.25	\$4.50
Crystal Wax10	.45	.75	2.00	7.00
Red10	.25	.45	1.25	4.50

Australian Brown. When the true imported stock is planted has proven one of the best onions for the South. It keeps unusually well, is practically free from disease and well adapted to dry, hot seasons. Color is a distinct amber brown. It is round, but not quite globe shaped. This is a very popular and excellent variety. Pkt. 10c, ½ oz. 15c, oz. 25c, ¼ lb. 75c, lb. \$2.50.

SOUTHERN RED GLOBE

Onion Sets

As stated before you can make a quicker crop of Onions by planting the Sets than from Seed. Our Sets are thoroughly dry, of medium size, and are thoroughly dependable. We have them in the following varieties, with prices noted:

	lb.	3 lb.	10 lbs.
White Silverskin50	\$1.00	\$2.50
Red Wethersfield35	.90	2.00
Yellow Danvers35	.90	2.00

The pound and three pound prices include postage; the ten pound price is by express collect, or will be sent by parcel post if you send postage. For price on large quantity, write us.

Okra

Okra is and no doubt always will be one of the standard Southern vegetable crops. Its seed generally easy to be had, and for this season a great many people are not very particular about their source of supply. But this really should make them all the more careful. We ourselves pay the same attention to Okra as we do to any of the other vegetables, and you will find too that it pays to plant the best. Prepare the land just as you do for Cotton and plant about the same time. One ounce plants 40 feet of row; 8 lbs. to the acre.

Mixson's Premium Velvet. An extra select strain of white Okra, extremely prolific, bearing from the ground up, with pods of unusual tenderness, and free from ridges. In other words it is a smooth Okra, and our trials have shown us that it is superior to any other variety, either as a home garden sort or as a shipping variety. Pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 60c, all postpaid. By express, 5 lb. lots 45c per lb.

Perkin's Mammoth. This is decidedly the best green Okra for you to plant. The pods are of great length, sometimes 8 to 10 inches, and in addition is very prolific. Pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 60c, all postpaid. By express, 5 lb. lot 45c per lb.

Mustard

This is one of the most popular salad plants and almost every gardener is familiar with Very easy to grow; ready to eat 5 weeks from sowing. Use 1 oz. seed 200 feet row.

Chinese. A splendid selection from China; very large, thick, broad, tender leaves; fine flavor. Pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 75c.

Giant Southern Curled or Ostrich Plume. This originated in the South and is one of the best salad plants ever grown. Our selection of this splendid variety is extra fine. Pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 75c.

PREMIUM WHITE VELVET

IMPROVED TELEPHONE.

Mixson's Garden Peas

Culture.—Begin planting the early smooth seeded sorts early in January, and for a succession planting may be made at intervals of ten days or two weeks until the middle of March, after which we recommend taller growing wrinkled varieties. The wrinkled varieties should not be planted until the ground begins to get warm, as they are apt to rot in the ground if it is cold and very damp. The extra earlies should be planted thickly in drills, 1 quart to each 100 feet, and covered about two inches. Cultivate clean and when they begin to bloom draw the earth well up to the plants. The tall wrinkled sorts may be planted in double rows six inches apart, leaving about 2½ feet between the double rows. Being rather stiff they will support each other, thus doing away with the necessity of "brushing" or "sticking." Use well-rotted manure, or, if this is not obtainable, use commercial fertilizer. Avoid fresh manure or you will have a rank growth of vine and few peas. In using fertilizer, do not let the seed come in direct contact with it or they will not germinate.

Mixson's High-Grade Extra Early. The earliest of all and especially adapted to our Southern soils and climatic conditions. The best pea of its class for Southern plantings. Very strong, vigorous grower, a heavy bearer of fair sized pods crowded with well-developed peas of good quality. It comes quick and bears heavy. A most excellent variety for the market gardener, the canner or the home garden. Grow without brushing. Pkt. 10c, ½ lb. 20c, 1 lb. 35c, 2 lbs. 60c, postpaid. By freight or express, not prepaid, 15 lbs. 2.70, 100 lbs. \$16.50.

First And Best. Also sold under name of First of All, Philadelphia Extra Early, First in the Market, etc. It is a very good market and home garden variety. Can be grown without brushing. Pkt. 10c, ½ lb. 20c, 1 lb. 35c, 2 lbs. 60c, postpaid. By express or freight, not prepaid, 15c lbs. \$2.70, 100 lbs. \$16.50.

Alaska. A variety of remarkable earliness and hardness. It is a good yielder and produces pods of fair size and dark green color, which are well filled with round, smooth peas of splendid flavor. Height, 2 feet. It is a standard Southern variety. Ready for the table in 48 days. Pkt. 10c, ½ lb. 20c, 1 lb. 35c, 2 lbs. 60c, postpaid. Notprepaid, 15c lbs. \$2.70, 100 lbs. \$16.50.

Ameer. Called in the South, Large Alaska. Height 18 to 20 inches; habit, dwarf, stocky and vigorous; color, dark green. The most robust grower we know of. This Pea comes in just behind Alaska, but pods are much larger and it is as prolific. Just the pea for the market or private garden. Pkt. 10c, ½ lb. 20c, 1 lb. 35c, 2 lbs. 60c, postpaid. By express, not prepaid, 15 lbs. \$3.25, 100 lbs. \$20.00.

Improved Telephone. On account of its beautiful large pods and high quality, one of the leading peas with market gardeners. Vines are vigorous, growing about 4 feet high, producing an abundance of very large pods filled with immense peas, which are tender, sweet and of excellent flavor. It is one of the best sorts for either home or market. No pea has attained greater popularity than this, thus showing that it has sterling merit. Pkt. 10c, ½ lb. 25c, 1 lb. 45c, 2 lbs. 80c, postpaid. By express not prepaid, 15 lbs. \$4.35, 100 lbs. \$27.00.

Gradus or Prosperity. This remarkable pea is not only large and of the best quality, but it is nearly as early as the small, round, extra early sorts. It is a wrinkled pea with vine growing about 3 feet high. The pods are bright green color; measure 4 inches or more in length, and are well filled with luscious peas—8 to 10 or more in a pod. Of the highest table quality and retain in a remarkable manner their color and attractive appearance after cooking. Pkt. 10c, ½ lb. 25c, 1 lb. 45c, 2 lbs. 80c, postpaid. By express, not prepaid, 15 lbs. \$4.00, 100 lbs. \$25.00.

Champion of England. Although this is one of the oldest of the tall growing late peas, it is universally admitted to be one of the richest and best flavored varieties. There is no other pea as sweet as this. The vines grow almost five feet high, are vigorous and produce large pods of luscious peas in the greatest abundance. Pkt. 10c, ½ lb. 20c, 1 lb. 35c, 2 lbs. 60c, postpaid; 15 lbs. \$2.25, 100 lbs. \$20.00, not prepaid.

Thomas Laxton. This pea, a cross between the Gradus and a Smooth early maturing variety, while practically new in this section, is fact gaining in popularity among all truck growers, and is proving one of the best that is grown here. Is a heavy yielder, has long, straight, green pods well filled. Is wrinkled when dry and among the earliest of this class. Pkt. 10c, ½ lb. 25c, 1 lb. 45c, 2 lbs. 80c, postpaid. By express, not prepaid, 15 lbs. \$4.00, 100 lbs. \$25.00.

Black Eye Marrowfat. A large, tall growing, late maturing variety that will furnish more picking and stay green longer than any other variety. Is planted in some of the truck sections in the winter as a cover crop and soil builder, at the same time producing large yields of peas of very good quality. Pkt. 10c, ½ lb. 20c, 1 lb. 30c, 2 lbs. 50c, postpaid. By express, not prepaid, 15 lbs. \$2.35, 100 lbs. \$14.00.

Bliss Everbearing. The home garden pea. Very stiff branching growth, and when properly lilled stands well without support. Is best planted in double rows 8 inches apart. It is a pea of extra fine quality for main crop and is truly everbearing. Pkt. 10c, ½ lb. 25c, 1 lb. 40c, 2 lbs. 75c, postpaid; 15 lbs. \$3.00, 100 lbs. \$19.00.

Notts Excelsior. One of the most popular of the early dwarf varieties, and very largely known throughout the South. A very prolific yielder. Pkt. 10c, ½ lb. 25c, 1 lb. 40c, 2 lbs. 70c, postpaid. By express, not prepaid, 15 lbs. \$3.85, 100 lbs. \$24.00.

Laxtonian. This is comparatively a new introduction, but one which we don't hesitate to recommend to you. It is really a large pod pea on a dwarf vine. Medium early, prolific yielder, and peas are of good quality. For years our supply has been so limited till a few truckers who knew this pea bought us out very early in the season, and many others were disappointed, but this year we are trying to have enough to go around. Pkt. 10c, ½ lb. 25c, 1 lb. 45c, 2 lbs. 80c, all postpaid. By express, not prepaid, 15 lbs. \$4.35, 100 lbs. \$27.00.

THOMAS LAXTON PEAS.

Pumpkins

Culture.—When the seed is planted with corn, plant only one row in five, which, when the vines begin to run, may be omitted in cultivation, and thus the plants will not be injured. Plant three to five seeds in every third hill of corn. Plant as a single crop in hills eight feet apart each way. Use Paris Green and Powdered Arsenate of Lead to control the striped squash bugs. When well established, thin to four plants in each hill. One ounce of seed will make 25 hills, four pounds seed required for an acre.

Mixson's Mammoth Jumbo. The largest pumpkin grown. Will weigh over 200 lbs. A prize winner. The flesh is fine grained and the quality is excellent. The flesh and skin are a bright golden yellow. Notwithstanding its large size, it is a fine variety for pies and is a splendid keeper. If you wish to see just how large a pumpkin can grow try this variety. Pkt. 10c, oz. 20c, ¼ lb. 50c, lb. \$1.75, postpaid.

MIXSON'S MAMMOTH JUMBO PUMPKIN

Large Cheese.

Large, round, flattened. About two feet in diameter. A fine keeper. Thick flesh of extra quality. A fine sort for family and market use. It is also grown quite extensively for stock feeding. Oz. 10c, ¼ lb. 30c, lb. \$1.00, postpaid.

Tennessee Sweet Potato.

Our large yellow stock pumpkin so generally grown in Georgia. Very productive and a good keeper. Pkt. 10c, oz. 15c, ¼ lb. 45c, lb. \$1.50, postpaid.

Japanese Pie. One of our best varieties. Bell-shaped and slightly ribbed; productive and splendid keeper. Fine quality. Pkt. 10c, oz. 20c, ¼ lb. 50c, lb. \$1.75, postpaid.

Cushaw or Crookneck. The old standard and popular Crookneck Cushaw. By mail, postpaid, pkt. 10c, oz. 20c, ¼ lb. 50c, lb. \$1.75.

Southern Field. An immensely productive, large, orange-colored, field pumpkin, usually grown for stock-feeding, but it also makes good pies. Oz. 10c, ¼ lb. 25c, lb. 80c, postpaid.

LARGE CHEESE PUMPKIN

Mixson's High-Grade Spinach Seed

BLOOMSDALE SAVOY SPINACH

Japanese Spinach. This is a wonderful oriental Spinach that will stand the summer heat, and may be sown in Spring or Fall. The leaves grow 10 and 15 inches long, are thick, smooth and light green in color. This is a selection that every one should plant this summer. Pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 80c.

New Zealand. This is a variety of Spinach that will stand the tender leaves others rapidly grow, thus furnishing splendid greens all summer. It furnishes an enormous amount of green food and is often planted by chicken fanciers for their flocks. Best to soak seed before planting. Sow 2 oz. to 100 feet row. Pkt. 5c, oz. 10c, ¼ lb. 20c, lb. 60c.

Culture.—Spinach should be sown for spring in January, February, March; for winter sow as soon as the nights get cooler, after September 1st, as Spinach seed will not germinate well in hot weather. Spinach must have rich soil—it is then easy to grow, and one of the best flavored of all greens or salad plants. Spinach contains a larger percentage of iron than other greens and for this reason is fine for the blood and probably the most valuable of green salad plants in a medicinal way. Every garden should have several rows of Spinach where there is room. Sow 1 oz. to 100 ft. row.

True Bloomsdale Curled Savoy Spinach.

Many thousands of gardeners find profitable employment in growing Spinach, and no crop pays better. Our stock of Curled Savoy Spinach is the truest and most beautiful on the market. Its growth is rapid, the leaf is properly curled, which gives it a very attractive appearance, and causes it to measure better than other sorts, and makes it a favorite with the largest growers. Pkt. 5c, oz. 10c, ¼ lb. 20c, lb. 50c, postpaid.

Salsify

This is a splendid vegetable and easy to grow; also easy to cook and serve. Sow seed in spring, having rows 18 inches apart, cover ½ inch. Have soil rich and worked down deep and fine. Keep soil loose and free from grass or weeds. Allow to grow until frost, as the flavor is better after frost and during freezing weather. May be pulled and used as wanted all winter. Sow 1 oz. to 100 feet of drill.

Mammoth Sandwich Island

is the variety to plant. Pkt. 10c, oz. 20c, ¼ lb. 65c.

SALSIFY

Mixson's Reliable Peppers

MIXSON'S RUBY GIANT

Culture.—Pepper seed is very slow to germinate, and will not at all unless the ground is reasonably warm. It is best started in not beds or in boxes indoors or in protected locations. Set out to open ground after all danger of frost is past, and the plants have six leaves. Rows should be three feet wide, and the plants fifteen inches apart on the row. One ounce of seed should make 1,000 plants, and ½ pound should give enough to set out an acre. If the plants come up thick, thin them out as close growing will make them spindly.

Mixson's Ruby Giant. This is one of the largest growing varieties along side is greatly reduced from real life. At the same time, it is very regular in growth, and is not so apt to be misshapen as some of the other very large types. The meat is very thick and firm, as well as mild flavored. It is one of the very best you can plant for home gardens, while its size and quality as well as its beautiful color makes it especially desirable as a market garden sort. Do not confuse it with Ruby King or Crimson Giant or Chinese Giant as it is not the same. Get the genuine stock from us, and you will have Pepper success this Spring. Pkt. 10c, ½ oz. 25c, oz. 45c, ¼ lb. \$1.50, lb. \$5.00, all postpaid.

President Wilson Pepper. This variety was originated in Georgia and we introduced it two years ago with unanimously satisfactory results. It is a very prolific bearer, fruits are good sized and very mild. Plants are strong and stocky. Pkt. 10c, ½ oz. 25c, oz. 45c, ¼ lb. \$1.50, lb. \$5.00, all postpaid.

Chinese Giant. A very large pepper, sweet flavored and mild, and a tremendous yielder. It is very popular in shipping sections and our strain of this variety is not excelled by any one. Pkt. 10c, ½ oz. 40c, oz. 60c, ¼ lb. \$2.00, lb. \$7.00, all postpaid.

Bell or Bull Nose. One of the standard sorts, known everywhere over the South. It does not grow to the size of some of the other varieties, but it is dependable, and is still very largely grown in many trucking sections. Pkt. 10c, ½ oz. 25c, oz. 45c, ¼ lb. \$1.35, lb. \$4.50, all postpaid.

Pimento. By far the mildest flavored pepper ever introduced and one that is gaining in popularity every year. It was first introduced in California, and very soon after we introduced it to our trade, after satisfying ourselves of its merit. It is very thick fleshed, a good bearer, and is very largely recommended for canning. If you haven't tried it before, we are sure you will be pleased with it. We have arranged for our usual supply of seed this year, and we know of none better. Pkt. 10c, ½ oz. 25c, oz. 40c, ¼ lb. \$1.25, lb. \$4.00, all postpaid.

Long Red Cayenne. This is our best hot pepper. It is well known throughout the South. It is very often used for dried peppers. Pkt. 10c, ½ oz. 25c, oz. 40c, ¼ lb. \$1.25, lb. \$4.25, all postpaid.

Vegetable Plants

Ferndale is, as you know, our own Farm and Trial Grounds, and it is there we grow our Plants—just eight miles from Charleston. We use the very best seed obtainable—in fact plants are nulled from these same beds for our crops, and you can bet your last dollar that if we knew where we could get better seed we would use it ourselves. They are grown by a careful man who knows his business and we are sincere in saying that we know of no better plant anywhere. All prices quoted are subject to change or our having the plants when order is received. Whether conditions are something over which we have no control.

Cabbage Plants. Grown entirely from our select Long Island Seed in the open, they will be found hardy and in every way satisfactory. To the grower who raises Cabbage for market earliness is of prime importance, and these plants will place him at least three weeks ahead of plants he could reasonably expect to get from seed he planted. To the home gardener, also, the use of plants is advantageous as it makes it much more convenient and surer for him to raise his crop. Great care must be taken that plants be neither too old nor too young or disappointment will result. Our farm superintendent has had years of experience in Cabbage, and the plants we pull and ship are exactly the same kind that we would use ourselves. The varieties we can supply are Early Jersey Wakefield, Charleston Wakefield, Mixson's Early Succession, Early Flat Dutch and Late Flat Dutch. Prices are as follows: 50c per 100, postage paid; by express collect, 500 for \$1.50, 1,000 for \$2.50. If you are a user of large quantities, write us, and we will try to quote special prices.

Sweet Potato Plants. This is one of our principal crops on Ferndale, and we save every year a quantity of seed for bedding. We have specially prepared bins to keep the two varieties separate, and the plants supplied will be absolutely true to strain, as well as strong and stocky. The seed will be bedded during the Winter, and we hope to have plants to ship about March 20. Of course everything depends on the weather, and for this reason we are not quoting, but will do so on application during March. Write us then, and we can give better information. Our varieties are NANCY HALL and PORTO RICA YAM.

Tomato—Pepper—Egg Plant. We also expect to have some of these plants, but as with Sweet Potato plants it is too early to tell much about when we will have them ready or price, because when this Catalog goes to press we have not even sent the seed up to the Farm. But the seed is here in our Warehouse, and everything is ready for the time to plant. Write us during March about this, telling us number of each you want, and we will give you exact information. We are growing what we consider the best varieties of each, the sorts we use ourselves on our own crops, and the list is as follows: Tomatoes—Mixson's Earliest of All, Dixie, Stone; Pepper—Ruby Giant and Bell; Egg Plant—Mixson's Improved Spineless.

PERFECTION PIMENTO

Mixson's High-Grade Potatoes

SOME OF OUR IRISH COBBLER STOCK

A Word About Seed Potatoes

There is probably no crop in all Agriculture that is more dependent on the Seed than POTATOES, and yet very often Seed of this crop is given the least consideration. Any Potato that is sound can be cut for seed, and will grow—but what about the crop? Sometimes it happens that a gardener runs short of seed, or is disappointed in not getting the supply he was depending on, and buys some from a grocery store. He buys just Potatoes, and it may be that it is just the kind that is suited to

the South and he makes a good yield, but how often is not the reverse true? The North grows a great many Potatoes, and has a great many varieties, which are shipped South for EATING, but it is safe to say that there are not over a half dozen varieties that are suited to the South for PLANTING. Then again all varieties that are suitable for planting are not suitable for SEED. Seed stock must be kept entirely separate and free from mixture, must contain no disease, be free from fro-

Large farmers whose living depends on Potatoes know this. They are very careful of the seed they plant. That is why Mixson supplies more Potato Seed in the South Carolina trucking sections than any other dealer. Scores of these men buy in car lots. Mixson gets the business.

There is, of course, a reason. Our prices may be a few cents higher than the man who thinks he has good Potatoes and trusts to a good deal, but we try to KNOW all we can. Mr. W. H. Mixson who has had thirty five years' experience in this Potato Seed Business looks after it himself. He doesn't attempt to do it by long distance telephone and telegraph. Most of our Potatoes come from Maine, and HE GOES TO MAINE HIMSELF. He knows the farmers personally, knows who is reliable, and who is not, sees the crops, and he can tell whether a crop is for seed or not. Certain crops are then contracted for, and when they come in to us they must stand another rigid examination. Every safeguard is thrown around our Potato business—we can't afford to be lax about it—AND YOU GET THE BENEFIT.

Now you may say that you don't grow Potatoes for market, and are inclined not to attach much importance to your order for a bag, bushel, or a peck, but why run the risk of a poor crop, playing hit or miss, when you don't have to? MIXSON GIVES YOU SEED POTATO PROTECTION. IT IS YOURS. WHY NOT HAVE IT?

Sacks contain 150 lbs. Prices are F. O. B. Charleston, you pay freight or express charges. Quotations now are very low and may think will advance. We will hold these prices as long as we can, but if an advance does come, we are not bound to fill your order, but will advise you. We think this is fair.

MIXSON'S NORTHWESTERN ROSE

After planting your potato crop don't let potato bugs eat up your crop, or blight ruin it. Use dry powdered Arsenate of Lead for the bugs and Bordeaux Mixture for blight. A crop costing dollars to make is certainly worth a few cents to save. See Page 27 for prices, etc. Order some with your potatoes—you will need it—and when you do you will have it on hand.

Irish Cobbler. By far the most popular Potato we list. White skin, roundish shape, deep eyes. It is extra early in maturing, which accounts for its desirability as a market garden sort. It is also excellent for home gardens, the quality of the potato itself being A-1. There is nothing more that we can do to improve this stock of seed that we have, and this year it will be up to its usual high standard. There are a number of other white potatoes grown in the North and West that closely resemble the Cobbler and it is not an unusual thing for a man who is not a Potato Expert to be fooled. Send your order to us, and be sure of getting the GENUINE PURE IRISH COBBLER. Peck 75c, bushel \$2.60, sack \$6.25.

Houlton Early Rose. The reliable old Maine grown Rose Potato—still planted in the South by thousands. Early in maturing, oblong in shape, skin pinkish. If you are still sticking to the well known old time variety, we can supply you with the genuine stock. Peck 75c, bushel \$2.60, sack \$6.25.

Mixson's New Northwestern Rose. Positively our own introduction and one that has met with the greatest success. Many people wanted to plant a Rose Potato, but found objections to both the Houlton Early Rose and the Spaulding's Rose—AND WE SOLVED THE PROBLEM. Mixson's New Northwestern Rose was the answer. It is as early as the Houlton and as productive as the Spaulding. Mr. W. H. Mixson worked on this Potato a good many years before offering it generally, but now we have no hesitancy in saying that it is THE BEST ROSE POTATO FOR THE SOUTH TODAY. Scores of our largest truck farmers plant it and the crops they get tell the tale better than we can. A little later than the Cobbler, but a bigger yielder, and is just the Potato for home gardens where a few day's difference doesn't matter much. It is a vigorous grower, with a large root system which enables it to withstand both drought and wet weather better than any other variety. Peck 75c, bushel \$2.60, sack \$6.25.

Spaulding's Rose No. 4. For years this variety has been used in many trucking sections. It is a very heavy yielder, withstanding adverse weather conditions, and is a reliable home garden sort. We first introduced this Potato into the South Carolina section, and have the genuine stock. Seed is oblong in shape, but more flattened than the Early Rose. Peck 75c, bushel \$2.60, bag \$6.25.

Red Bliss Triumph. Still used by many throughout the South. Is early, producing potatoes of good quality and we have a stock of this variety that will please you. On account of the fact that other varieties have become more popular with others, some seedsmen may not be paying as much attention to Red Bliss as they used to, but we are still insisting on getting the genuine stock. Peck 75c, bushel \$2.60, sack \$6.25.

Seed for Second or Fall Crop. We expect to have this Summer a High Grade stock of such varieties as Lookout Mountain, Green Mountain, Peach Blow, Cobblers, Rose, and Bliss. Write us for prices when ready to buy.

Early Norther. For several years we have been selling this selection to some of our largest truck farmers, many in car lots. We tried it out in a small way first and the results were so uniformly good until we can offer it to you with full confidence. It is strictly a Maine grown Potato, of the Rose type, and those who still want a Maine grown Rose can find nothing better than our Early Norther. It is early in maturing, coming in right after Irish Cobbler, and much before Spaulding's. It is also a very heavy yielder, and last season some of our heaviest yields were made from this variety. Peck 75c, bushel \$2.60, sack \$6.25.

We have priced our Potatoes very low this year, but remember that if you have them offered to you any cheaper there is very liable to be a difference in quality. The man who buys "just potatoes" can naturally sell cheaper than one who pays the attention to our potato business that we do. The difference may not be told in the looks of the seed, but will be shown at digging time.

Mixson's Superior Tomatoes

Culture.—For earliest tomatoes start in a hot-bed or a small box in kitchen which may be later moved to a sunny southern porch. Plant the seed in this way a month before last frost usually occurs, and when about 4 inches high, transplant to cans, strawberry boxes or anything that will allow each plant plenty of space to develop; this will give you stronger, healthier plants, earlier fruit and a greater quantity. Sow seed thinly in box and cover $\frac{1}{2}$ inch. Transplant when danger of frost is past. The soil should be well plowed or spaded, then raked out until perfectly pulverized. Put on a heavy application of air slacked or hydrated lime and 16 per cent. acid phosphate at rate of 1,000 lbs. per acre. Also work in well-rotted, black stable manure. Set plants 3 feet apart each way, cultivate clean. To produce the most tomatoes in a small garden and the best quality, tie vines to stake and thin out the leaves as the plants grow. Seed for fall crop should be planted in May and June. Complete Bulletin on Tomato Growing may be obtained from U. S. Dept. of Agriculture, Washington, D. C. 1 oz. seed for 1,500 plants, $\frac{1}{4}$ lb. per acre.

Mixson's Earliest Of All

This variety meets every expectation of what an early Tomato should be. It is our original introduction and every year we sell more than the year previous until now it is one of the best known varieties over the entire South. We knew it was good when we first introduced it, but naturally people had to plant it to see for themselves, until now we have hundreds of complimentary letters from all over the South. Most extra early varieties sacrifice some very desirable quality to earliness; some sacrifice size, some color, and others quality, but we have never before seen a variety hold its number of good points and still be early. It is the earliest sort we know, skin is smooth pink, meat is solid, and it is a vigorous grower. Most early sorts too are short lived, but this variety has a long bearing period. One gentleman from Georgia writes us on October 16 that some of his vines were still bearing, and a lady from Tennessee writes the same thing on Oct. 3, and these were crops planted early, too. Another party writes, "Had beautiful fruit, both early and late, and not one died of wilt or blight".

We are positive that this variety will please you. If you have not planted it before, we are sure you will again; if you have not, plant it this year. We are fully confident that it is the very best early Tomato you can get anywhere. Pkt. 10c, $\frac{1}{2}$ oz. 25c, oz. 40c, $\frac{1}{4}$ lb. \$1.25, lb. \$4.50, all postpaid.

Dixie. One of the most reliable varieties you could possibly use for main crop. It is not as early as Earliest of All, but is medium early. Makes a perfect red tomato, fine average size for packing and shipping. Flesh is firm and solid, and vines are strong, vigorous and blight resistant. There will be less cracked tomatoes in Dixie than almost any other variety. It makes an excellent canning sort, and in fact for an all around variety we know of none better. Pkt. 10c, $\frac{1}{2}$ oz. 25c, oz. 40c, $\frac{1}{4}$ lb. \$1.20, lb. \$4.25, all postpaid.

Mixson's New Blight Proof. Blight or Wilt is a disease all Tomato growers have to contend with and is one that absolutely ruins many crops. Here, however, we have a variety that has been bred up to resist this

MIXSON'S EARLIEST OF ALL

blight and for the second season we are offering it to our friends, feel confident that it will please them. The vines are strong and vigorous and the fruit is red, full sized, and solid. Pkt. 10c, $\frac{1}{2}$ oz. 25c, oz. $\frac{1}{4}$ lb. \$1.20, lb. \$4.25, all postpaid.

Read What Some Customers Think of Mixson's Earliest Of All

Cottageville, S. C. "The Earliest of All Tomato seed that I planted were all right and I think every one of them must have germinated. The plants were hardy and grew well. The fruit was smooth and of fine flavor and it began ripening several weeks earlier than the other variety that I had planted. I consider it a very good tomato."
(Signed) George W. Kay.

Mantee, Miss. "Your Earliest of All Tomatoes are fine. They are extra early and a fine tomato."
(Signed) Mrs. G. B. Pepper.

Opelousas, La. "I can cheerfully recommend your Earliest of All Tomato as an early tomato and a continuous bearer. I am still using tomatoes from my spring planting and the vines are full of green tomatoes at this writing."
(Signed) T. W. Caldwell.

Tryon, N. C. "I have tried several kinds of tomatoes this year, but like your Mixson's Earliest of All better than any. Besides being early they yield a great many to each plant. Wishing you much success."
(Signed) Mrs. R. F. Belue.

Oktibbeha County, Miss. "Find enclosed order for tomato seed flower plants. I have planted your Earliest of All tomato and it is fine."
(Signed) Mrs. Ida Dav

Reevesville, S. C. "My Earliest of All Tomato plants did fine. beautiful fruit, both early and late, and not one died or blight or I shall be glad to continue the use of your seed and gladly recommend them to my friends."
(Signed) Mrs. G. R. Funche

Huntersville, N. C. "I received the paper of Earliest of All To seed last spring and was well pleased with them. We had more tomatoes and nicer ones than we have had for a long time."
(Signed) Mrs. Ellie Irv

Oakdale, La. "Your Earliest of All is a very fine tomato. Has few seeds, the flesh is nearly solid, and has a good flavor."
(Signed) A. M. Bry

Meriwether County, Ga. "Am pleased with results from my seed. Send enclosed order at once."
(Signed) Miss Addye Swearing

Other Excellent Varieties of Tomatoes

NEW STONE TOMATO

New Stone. One of the largest, most solid and meaty of all tomatoes, and especially valuable for late plantings. It has heavy foliage, thus protecting the fruits from the burning sun of late summer and early fall. It is very solid and a good shipper: smooth and uniform in growth. Color, a desirable red. Fine for canning, for its solidity and few seeds. A splendid variety for both home and market gardeners for late crops. Pkt. 10c, ½ oz. 20c, oz. 30c, ¼ lb. 90c, lb. \$3.00, postpaid.

Improved Southern Ponderosa. A purpleish pink tomato of the largest size. Vine vigorous and very productive. Fruits very solid, with exceptionally few seeds, fairly smooth and considered of very good quality, especially by those who prefer a tomato quite free from acid. Ripens about midseason. Very desirable for slicing. Pkt. 10c, ½ oz. 25c, oz. 40c, ¼ lb. \$1.40, lb. \$5.00, postpaid.

The Matchless. For a first-class, general crop tomato for all purposes, there is none better than our Matchless. It follows such varieties as Livingston's Globe; but stays with you all summer, its dense, heavy foliage protecting the fruit from mid-summer sun. It is large, smooth and of very rich red color. Almost solid meat with very little core and small seed spaces. A strong, vigorous grower and fruits heavily, the large size holding up to the end of the season. Fine for either home use or market and unexcelled for canning. Pkt. 10c, ½ oz. 20c, oz. 30c, ¼ lb. \$1.00, lb. \$3.25, postpaid.

LIVINGSTON'S GLOBE TOMATO

New Early Acme. The old Acme Tomato was always a favorite with our customers, but it had serious faults which have been eradicated in our "New Early Acme," an early tomato that will please you. A vigorous grower with open growth, a heavy bearer that ripens evenly all over. Fruits in clusters of 3 to 5, of medium to large size. In color it is a purplish shade of red, the most desirable color for shipment or market. Has few seeds, is meaty and solid. Skin tough but thin. With its fine color, you will find it most desirable for shipment, local market or home use. Pkt. 10c, ½ oz. 20c, oz. 35c, ¼ lb. \$1.00, lb. \$3.50.

Chalk's Early Jewel. Within one week of being as early as the Earliana, the fruits being uniformly larger, smoother, thicker through, more solid and of much finer quality. The fruits are very deep through stem to blossom end, being almost round or ball-shaped, and from 3 to 3½ inches in diameter. The interior is very solid and fleshy with very few seeds; quality is exceptionally sweet and free from acidity. Pkt. 10c, ½ oz. 20c, oz. 35c, ¼ lb. \$1.00, lb. \$3.50.

Early Redfield Beauty. A favorite with our market garden customers and shippers, as well as for an early maturing variety for the home garden. It is early and of open growth, letting the sun to the fruit, ripening it quickly. A good general cropper. We sell this variety almost exclusively to many of the tomato shippers of Florida. In color it is a rich, glossy crimson, fruits solid and meaty with small seed cavities. Medium size with thin, tough skin. Pkt. 10c, ½ oz. 20c, oz. 35c, ¼ lb. \$1.00, lb. \$3.50, postpaid.

Livingston's Globe. A new tomato with many desirable points. Beautiful, bright, glossy, red color, fruits rather globe-shaped, although many of them do not show full globe shaped form. Fine flavor and fruits very solid. Pkt. 10c, ½ oz. 25c, oz. 40c, ¼ lb. \$1.25, lb. \$1.00, postpaid.

Sparks' Earliana. A famous selection of the extra early varieties. Plants are of open growth, letting sunlight in to the fruits. Fruit forms in clusters of 5 to 8, medium size and of deep scarlet color. This tomato is being sold under a dozen different names. We have the genuine. Pkt. 10c, ½ oz. 20c, oz. 30c, ¼ lb. 90c, lb. \$3.00, postpaid.

Red Rock. This is one of the finest tomato selections, matures in 115 days. Very solid, smooth, well bred and is red to the center. Pkt. 10c, ½ oz. 20c, oz. 30c, ¼ lb. 90c, lb. \$3.00, postpaid.

Dwarf Champion. This is the best tree tomato; it makes a strong bush which holds its big crop of fine tomatoes up off the ground without staking. Fruit is large, bright red, fine quality. Pkt. 10c, ½ oz. 25c, oz. 40c, ¼ lb. \$1.25, lb. \$4.00, postpaid.

June Pink. This is a good pink selection, makes big crop of fine fruit; excellent for shipping or any purpose. Pkt. 10c, ½ oz. 20c, oz. 35c, ¼ lb. \$1.10, lb. \$3.75, postpaid.

Early Detroit. This is a popular and good tomato in some sections. We have seed from the original stock. Pkt. 10c, ½ oz. 20c, oz. 35c, ¼ lb. \$1.00, lb. \$3.50, postpaid.

SPARK'S EARLIANA TOMATO

Tomato Plants.

We will have an exceptionally fine lot grown on Ferndale. See page 17 for varieties, prices, etc.

Mixson's High-Grade Squash Seed

IMPROVED E. E. WHITE BUSH

Culture.—Plant only when danger of frost is past. Prepare the soil thoroughly and make it rich. Plant bush varieties 3 feet apart each way and make 1 inch. When rough leaves are formed thin out to two plants. Keep the ground free from weeds and grass by frequent light hoeing. Do not disturb plants, except to pick squash, which should be kept picked off as soon as ripe. Plant running squash, which mature for winter use, in June and July. Hills 4 feet apart each way, 1 oz. seed 25 hills, 3 lbs. per acre.

Improved Extra Early White Bush. This is a prolific early type of white squash. It is strong, vigorous, rapid grower, develops quickly a snow white squash perfect shape and finest quality. It has developed, well-formed, marketable fruits weeks earlier than Early White Bush. Pkt. 10c, oz. 15c, ¼ lb. 45c, lb. \$1.50, 5 lbs., by express, \$1.25 per lb.

Mammoth White Bush. Is nearly double the size of Extra Early White Bush. White Bush, is very uniform in size, perfect and fine quality; grows to 12 inches in diameter. O. K. for home garden or shipping. Pkt. 10c, oz. 15c, ¼ lb. 45c, lb. \$1.50, postpaid. 5 lbs., by express, \$1.25 per lb.

Early Yellow Summer Crookneck. An old standby; always a favorite in both home and market gardens. Fruits rather small; of bright orange color. Flavor very rich and buttery, the richest of all summer squashes. Pkt. 10c, oz. 15c, ¼ lb. 45c, lb. \$1.50, by express, \$1.25 per lb.

Early Yellow Bush, or Golden. This is very much like the White Bush, except the color. It matures early, meat is yellow, fine and sweet. Pkt. 10c, oz. 15c, ¼ lb. 45c, lb. \$1.50, postpaid. 5 lbs., by express, \$1.25 per lb.

Giant Summer Crookneck Squash. In our Giant Crookneck we have a variety containing all of the good qualities of the crookneck class and at the same time giving double the size of the Old Yellow Summer Crookneck. For market gardeners it is especially desirable. We recommend it without reserve to our customers. Pkt. 10c, oz. 20c, ¼ lb. 60c, lb. \$2.00, postpaid. 5 lbs., by express, \$1.75 per lb.

Hubbard. Most largely planted winter variety. Flesh rich, very fine grained and sweet. Cooks up dry and is a perfect table variety. Pkt. 10c, oz. 15c, ¼ lb. 45c, lb. \$1.50, postpaid. 5 lbs., by express, \$1.25 per lb.

Boston Marrow. Oval, fine grained, orange fleshed. Pkt. 10c, oz. 15c, ¼ lb. 45c, lb. \$1.50, postpaid. 5 lbs., by express, \$1.25 per lb.

Cocozelle, or Italian Squash. Grows large, oblong shape, dark green color at first, but when ripe is marbled with light green and yellow stripes. When sliced and fried in oil it is a vegetable delicacy superior to any other. This is an excellent squash and should be in every garden. Pkt. 10c, oz. 20c, ¼ lb. 65c, lb. \$2.00. 5 lbs., by express, \$1.75 per lb.

French Grown Radish Seed

Japanese Radish—Sakurajima. Immense size and good quality. Some weigh 15 lbs. Oval shape, cream color skin, white flesh, cook like turnips, but not strong. Sow in April and May. Pkt. 5c, oz. 20c, ¼ lb. 60c, lb. \$2.00.

Rosy Gem Radish. Also known as White Tipped Scarlet Ball. It is very desirable for home gardens, being almost identical with our Cardinal Globe except in the white shading at base of the root. It is one of our earliest varieties. Very tender and crisp, never becoming hollow or pithy until very old. Packet 5c, oz. 10c, ¼ lb. 30c, lb. \$1.00, postpaid. 5 lb. lots, by express, 80c per lb.

Improved French Breakfast. A medium sized radish, olive shaped, small top, of quick growth, very crisp and tender, a beautiful scarlet color except near the tip, which is pure white. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. \$1.00, postpaid. 5 lb. lots, by express, 80c per lb.

Long White Icicle Radish. Perfectly white in color, and long, slender and tapering in shape. It quickly grows to market size, is crisp and brittle, and of mild, sweet flavor. It remains tender during the entire growing period and is quite as good when an inch in diameter as when only half an inch. A fine variety for both market and home gardeners who want an early, long white radish. Pkt. 5c, oz. 10c, ¼ lb. 45c, lb. \$1.00, postpaid. 5 lb. lots, by express, 80c per lb.

Early Long Scarlet. This is the most popular of all radishes in the South for the general garden use and market. Tops rather small, roots long and tapering to a decided point; color an intense bright scarlet. Flesh is very crisp and tender and when grown rapidly, as all radishes should be, it is free from all pungent taste. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. \$1.00, postpaid. 5 lb. lots, by express, 80c per lb.

Other Standard Varieties. We can supply also the following excellent varieties, all grown under the same conditions as the foregoing and at the same prices as Long Scarlet: Round White Forcing, Scarlet Turnip White Tip, White Box, Chartier, Celestial.

Chinese Rose. Standard variety; bright rose color; flesh firm, crisp, tender, quite pungent. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. \$1.00, postpaid. 5 lb. lots, by express, 80c per lb.

Round Black Spanish. Skin black, flesh white; highly flavored. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. \$1.00, postpaid. 5 lb. lots, by express, 80c per lb.

Cardinal Globe or Early Scarlet Turnip
Grow globular in shape, and are of a most brilliant cardinal red color. They will stand considerable heat, therefore it is a quick forcer, and the quality is fine, being crisp and tender. It is by far the best variety for forcing and also does well in open ground. Pkt. 5c, oz. 10c, ¼ lb. 30c, lb. \$1.00, postpaid. 5 lb. lots, by express, 80c per lb.

WHITE ICICLE RADISH

Mixson's Ruta Bagas and Turnips

Culture.—Of course, most turnips are planted in the fall. Many varieties may also be grown in the early spring and the quality of spring turnips is usually better than of the fall crop. Have the ground made rich with thoroughly rotted manure, which must be well worked into the soil, then drill the seed thinly January to March. Gauge the time of sowing to the locality and season. Sow seed for Rutabaga July to September; turnips for Fall, August to November. Along the Gulf Coast and Florida, seed may be sown all winter. 1 oz. seed 200 feet drill, 5 lb. to acre.

This is one of our big sellers. We supply thousands of pounds of this selected seed to merchants, truckers and home gardeners, and each year the demand increases. We take great pride in the quality of this seed and the splendid crops grown for market by our trucker customers. Here at Charleston our Improved Purple Top Yellow Rutabaga is in greatest demand as this is the main turnip crop of the trucker in the Fall. They have found our seed superior to any on the market. This is because we have used every means possible to make it so.

MIXSON'S IMPROVED PURPLE TOP YELLOW RUTABAGA

Early White Flat Dutch. Exactly like the Early Red or Purple Top Strap Leaf except that they are pure white. Very early, sweet and tender. Oz. 10c, ¼ lb. 25c, lb. 75c, postpaid.

Large Early Red or Purple Top Globe. Makes large globe-shaped roots, white flesh, with purple top. Very fine grained, tender and sweet. A most desirable sort for the table or for stock-feeding. Large size and a heavy yielder. Oz. 10c, ¼ lb. 25c, lb. 80c, postpaid.

Early White Egg. A quick growing, egg-shaped, smooth, pure white variety, with small tops. Flesh sweet, firm and mild. Another most excellent table sort. Oz. 10c, ¼ lb. 25c, lb. 75c, postpaid.

Seven Top. A very hardy variety, grown exclusively for greens. Oz. 10c, ¼ lb. 20c, lb. 60c, postpaid.

Early Red or Purple Top Strap Leaved. White with purple top; very fine grained, sweet and tender. Quick growing, popular for market or private use. A most desirable table sort. Oz. 10c, ¼ lb. 25c, lb. 75c, postpaid.

Extra Early Purple Top Milan. The earliest turnip in cultivation. Medium size, flat, skin and flesh pure white with purple top. Very sweet and tender; finest quality. Oz. 15c, ¼ lb. 45c, lb. \$1.50, postpaid.

Pomeranian White Globe. Very large round, pure white roots; excellent for table or stock. An enormous yielder. Oz. 10c, ¼ lb. 25c, lb. 75c, postpaid.

Southern Snow White Globe. A superior large white globe turnip. Very large, pure white, very fine grained, excellent quality. Oz. 10c, ¼ lb. 30c, lb. 85c, postpaid.

All Turnips
5c Packet

Long White Cow Horn. A very productive, quick growing turnip. Of excellent quality, fine grained and very sweet. Used largely for stock feeding as well as for table. Oz. 10c, ¼ lb. 25c, lb. 85c, postpaid.

Large Amber or Yellow Globe. Of large size, globe-shaped, yellowish flesh with greenish top. Fine for table or stock. An excellent keeper. Oz. 10c, ¼ lb. 25c, lb. 75c, postpaid.

Purple Top Yellow Aberdeen. Flesh yellow, very solid, sweet and tender; hardy and a heavy yielder; splendid keeper; fine stock turnip and preferred by many as a table sort. Pkt. 5c, oz. 10c, ¼ lb. 25c, lb. 75c, postpaid.

Yellow Rutabaga Varieties

Mixson's Extra Selected American Purple Top. An improvement on the old Purple Top. These seeds are saved from crops that have been grown from roots selected for large size, uniform shape and fine quality. Hardy, sweet, a good keeper, the best shaped and most productive. Oz. 10c, ¼ lb. 25c, lb. 75c, postpaid.

Long Island Improved. An unexcelled strain of Rutabaga—one in which we take pride. The seed is grown especially for us from roots selected for size, shape and color. Very little neck; good for table use when small. Oz. 10c, ¼ lb. 25c, lb. 75c, postpaid.

MIXSON'S PURPLE TOP GLOBE TURNIP

Special Turnip Offer.

Your selection 3 Packets any varieties, 10c.
Your selection 3 Ounces any varieties, 20c.

Mixson's Plants, Bulbs, and Flower Seeds

Our Plants are shipped to you direct from our Nursery, and as a rule it takes a little longer to handle an order for plants than an order for seeds. If, therefore, you order seeds with your plants, you will get the seeds first, and the plants will follow. On an average it takes a week or ten days for us to transmit your order to the Nursery, pack it up, and get it to you. Moreover, weather conditions have to be taken into consideration, and it may happen that just at the time your order is received we will be having a bad spell, in which event your order is held up a few days for better weather. We use every effort in getting the plants to you in good shape, and ask your consideration of these facts.

SPECIAL ROSE COLLECTION

12 Hardy Everblooming Roses for \$2.00, or Any Six for \$1.25, Postpaid.

- | | |
|--|--|
| Mrs. B. R. Cant—Red
Burbank—Pink

Nancy—Dark blue.

Purple Prince—Double; sepals scarlet, corolla beautiful blue.

TRITOMA or RED HOT POKER PLANT—Grows two to four feet sunny location. Flower spikes of gigantic size, frequently over 1 foot high, with heads of blooms over twelve inches long. Color orangescarlet, shading to salmon-rose. 35c each.

DAY LILY (Funkia)—Hardy, grows eighteen to twenty-four inches. Easy culture and their broad leaves make them exceedingly showy, the border even when not in bloom—35c each.

Mixson's Evergreen Lawn Grass

A mixture of grasses and clovers so arranged that a continuous sward is the result. Excellent preparation of land is the first essential; do not use stable manure, unless you are sure it is well rotten, some good ready mixed fertilizer is preferable. Our mixture makes very quick showing and the lawn will be even, fine, and velvety. The great problem is to get a lawn that will be in condition all the time; swards die down in winter, others in summer, but Mixson's Evergreen Mix fills the bill better than anything else we have ever seen. Sow this at the rate of 50 lbs. to the acre. Price, per lb. 60c, 3 lbs. \$1.45, postpaid 10 lb. lots, not prepaid, 45c per lb.

Insecticides and Spraying Materials

What does it profit you if you plant and work a crop, having it almost up to maturity and then let bugs, worms, or disease ruin it? It costs dollars to make a crop, when only a few cents will save it.

POISONS CANNOT BE SENT BY MAIL.

Arsenate of Lead. In powdered form only. Absolute death to all leaf-eating insects such as Potato Bugs, Tobacco Horn Worms, Codling Moth, Cabbage Worms, etc. Easily applied in the dry form by dusting, or can be applied as a spray if desired. Does not burn the plant, and for this reason is superior to Paris Green. Practically all of the large Potato and Tobacco growers in the South now use Dry Powdered Arsenate of Lead. For the home garden we unhesitatingly recommend using this. ½ lb. 35c, 1b. 65c, 5 lbs. at 60c, 10 lbs. at 50c. Packed also in larger packages. Write for prices.

Bug Death. Used to kill all leaf-eating insects, and in addition acts as a tonic for the plant increasing both its growth and yield. It is not as strong as either Arsenate of Lead or Paris Green, and will not burn the plant as Paris Green sometimes does. Can be sent by mail. Postpaid, 1b. 27c, 5 lbs. postpaid 75c. Write for prices in larger quantity.

Lime Sulphur Solution. In powdered form. This Fungicide has usually been sold in the liquid form only, but why pay freight or express on water, when you can add it

yourself out of your own bucket? Used as an effective control for San Jose Scale, Oyster Shell Scale and other scaly diseases. Lb. 40c, 5 lbs. at 29c. Write for prices in larger quantity.

Paris Green. This is a very strong poison for all leaf-eating insects, such as Potato Bugs, etc. It is generally used with some kind of a filler such as land plaster, to avoid getting it on too thick, as it is liable to burn the plant otherwise. ½ lb. 35c, 1b. 60c, 5 lbs. at 55c.

Dusting Sulphur. Used on plants to kill mites as well as many fungus diseases that annoy the gardener and orchardist such as mildew on roses and flowers, early blight on Potatoes, Scab on apples and pears and brown rot on peaches. A combined fungicide and insecticide, can easily be made by mixing Sulphur with Arsenate of Lead. By mail, postpaid, 20c per lb.

Bordeaux Mixture. Very largely used to prevent or control fungus diseases such as blight, rust, scab. It also acts as a tonic to the plant improving its growth and yielding. Last year a large acreage of Potatoes were affected with blight and Bordeaux was used extensively. Our Bordeaux is in the dry powdered form, which makes it much easier to handle, besides saving you the carriage charges on the water. Lb. 45c, 5 lbs. at 40c, postpaid.

Tobacco Dust. Sold by us in the form of a very fine powder which is dusted over the plant. It is very efficient in repelling many kinds of bugs and in keeping the foliage free from Aphis and Lice. Pound, 20c, postpaid.

Pat. March 16 and Nov. 9, 1897.

An Interesting Booklet Free to You

There are so many pests to bother the farmer and home gardener, and it is so difficult very often to know exactly what to do for their control. Therefore, we have arranged to put out this season a booklet "Garden Pests and Their Control". It shows a colored drawing of nearly every bug or insect that will attack your garden patch or garden and tells

just what to do for him. Don't wait till you see signs to ravages to ask for this booklet. It is yours now-free. Ask for it, keep it in the house, then when you see signs of Mr. Bug you can look up and see what to do for him. Very often a day or two saved means the saving of the whole crop.

Dusting and Spraying Apparatus

Dry Dusters. Used for the application of all dry powders. Emits a perfect cloud of dust completely covering every plant. Especially useful for garden patches or small farms. Taken care of, one will last several years. Price \$2.50 each, postage 15c extra.

Large Dry Dusters. Larger than the Dusters quoted above and capable of doing much more work. We advise its use especially on farms where there is a comparatively small acreage. Price \$17.50 each.

Small Spray Pumps. Strongly made and entirely serviceable in every particular. Very useful in small gardens and should be on every farm as there are any number of uses it can be put to. Can be used for applying insecticides, fungicides, disinfectants, fly drivers, etc. Price 60c each. Postage 15c extra.

Small Continuous Spray Pumps. Same capacity as the Sprayer above, except that it is made of brass, and therefore will last longer. It is also continuous in operation, as it acts both on the up and down stroke, while the one described above operates only on the downward stroke. Price \$1.75. If sent by mail, 15c extra.

Auto Spray Pumps. This Sprayer can be used for spraying all kinds of garden truck, trees, bushes, shrubs, vines, etc., and will handle all spray solutions successfully. One great advantage is that it works automatically. In other words, the operator need not be pumping continuously. After the tank has been filled with the spraying material, compressed air is worked in by means of the plunger. This is then locked, and you are ready for spraying and a continuous stream or spray results as long as the air lasts. It is furnished with a stop cock or automatic shut off. It is furnished with a strap for the shoulder, and the entire spray is directed with one hand. The new Auto Spray is furnished with a patent screen which prevents clogging. It is made in either brass or galvanized iron. Of course the brass pump will last the longer, but either, if properly taken care of, will see service a long while.

Brass Tank (No. 1-B) \$12.00 each
Galvanized Tank (No. 1-D) 9.00 each

Bucket and Barrel Pumps (No. 7). Designed to handle all spraying solutions. It is made almost entirely throughout of brass, and all castings that do not come into contact with the solutions are of malleable iron. Three foot hose and brass strainer nozzle go with the outfit. Price, \$7.00 each.

Arsenate of Calcium. We have made arrangements to handle this poison again this year, together with the very best and latest Dusters for its application. We will have full information on file and correspondence is solicited.

Mixson's High-Grade Cotton Seed

Medium Bolls

Being situated in a section of the country where a great deal of attention is paid to the propagation of the finest types of cotton, and where a number of the leading varieties have been originated, we naturally have been called upon to supply numbers of growers throughout the entire South and Foreign Countries with our select strains of Cotton Seed, such as they are unable to get from any other section of the country. Our Cotton Seed business gained so much in proportions from year to year until five years ago we were obliged to make a separate department for it in our business in order that we may look out for our customers' interests in the best manner possible and furnish them with the very best Cotton Seed obtainable. This Department is in charge of an expert cotton man who sees to it that our Cotton Seed is handled in the proper manner from the selection of the seed to the harvesting of the crop and sacking of the seed.

No matter whether cotton and cotton seed are bringing a high price or a low price it always pays to plant the best selected seed on your farm. A well selected uniform seed will produce much larger crops and higher grade lint than seed which have run out. Don't you think it is better to sell your old mixed seed to the oil mill then add to what you get per bushel the amount necessary to secure a well selected variety, pure and true to type? We know so and believe you will be repaid many times over for this small outlay of money.

Short Staple Varieties Large Bolls

Mixson's New Extra Early Big Boll. Our own selection of a large boll early maturing variety. See full description and prices on opposite page.

Cleveland Big Boll. (See photograph on inside of front cover.) of the Wannamaker Strain is the very best of that variety that can be secured and is the most largely grown cotton in existence. We handle the Wannamaker Strain grown in the county of this state which is the original home of this wonderful strain of cotton. It is our honest opinion that you could from no source obtain a stock of it superior to what we offer to our customers. This cotton branches and fruits heavily and is an extremely early cotton, setting hard fruit very quickly which makes it an admirable cotton with which to fight the Boll Weevil. The bolls run around 60 to 65 to the pound and 90% five lock, the staple is one to one and one-eighth inches in length and in most markets brings a premium over other short varieties. We have only the middle pickings for seed and there was not a sign of Anthracnose or disease in the crops from which our seed were saved. This cotton often produces a bale to two bales to the acre and turns out 38 to 40% lint. Price, \$2.25 per bu., 10 bu. \$21.00.

Cook Improved. A large boll type of cotton much liked in some sections of the country. It is a heavy fruiter and has a good many fine points but it has been found to be subject to Anthracnose, otherwise an excellent cotton. Our stock is first class in every respect and there was no Anthracnose or other disease in the fields where our stocks were grown. Price \$2.25 per bu., 10 bu. \$21.00.

King Early. We offer a highly improved selection of this well known early maturing sort of short staple cotton. Our seed stock is grown for us in North Carolina by the originator KING Cotton Seed and is all that could be wished for in a uniform of high grade seed of maximum productiveness. The staple is $\frac{3}{8}$ to $\frac{1}{2}$ inch, the bolls run 75 to the pound. Identified by small red spots in great many of the bolls. It is considered one of the best cottons for boll weevil country. Price, per bu. \$2.25, 10 bu. \$21.00.

Simpkins Prolific. One of the first varieties that won a reputation as being excellent for planting under Boll Weevil conditions due to its exceedingly early maturing. Under average conditions the plant is of moderate growth and literally covered with fruit. The bolls are small, running around 80 to 85 to the pound, the staple is $\frac{3}{8}$ inch in length. The standard of this high grade cotton has been kept as high as it ever was and our stock is as good as it can be secured in North Carolina where the only reliable stocks can be secured. Price, \$2.25 per bu., 10 bu. \$21.00.

Simpkins Ideal. A selection from the Simpkins Prolific similar in a good many ways. The bolls are larger running 70 to 75 to the pound and the plant growth is even more compact than the Prolific. It is the earliest maturing cotton that we know of. In addition to the earliness which was derived from constant selection with that end in view, our stock is grown for us in the northern part of North Carolina which has a tendency to make it still earlier and more hardy. We have furnished this most excellent selection of seed to our customers all over the South for years and they come back every year with good reports and wanting more seed. We have a number of large growers who will plant no other variety and insist on having our strain of North Carolina grown SIMPKINS IDEAL. We recommend it highly for planting under Boll Weevil conditions or anywhere where an early maturing heavy producing variety is wanted. Price, \$2.25 per bu., 10 bu. \$21.00.

Moneymaker is a variety of cotton the popularity of which has grown much in the past few years. We have a number of calls for it each year and are always in a position to furnish the very best selected stocks obtainable. The staple is $\frac{3}{8}$ to 1 inch, the limbs are short and closely fruited and it is considered one of the earliest maturing varieties. It is largely planted in the Boll Weevil country. Price \$2.25 per bu., 10 bu. \$21.00.

Toole Prolific. This is an old South Carolina variety that is hard to beat in a good many ways. It has been a standard cotton for a number of years and we do not believe it could be secured from any other source as reliable stock as you can get from us. Unless you get the genuine seed stock you will fail to appreciate many good points of this cotton. It is a branching heavy fruiter variety that is quite early in maturing its bolls. Price \$2.25 per bu., 10 bu. \$21.00.

SIMPKINS IDEAL COTTON

If you are in the market for large amounts of Cotton Seed, write us for Special Prices.

Mr. L. H. Harvin, of Manning, S. C., writes: The Cleveland Big Boll Cotton Seed bought of the past season has been very satisfactory. The last bale I had ginned turned out 530 pounds of lint from 1360 pounds of Seed Cotton which I consider excellent.

Mr. E. G. Stukes of Davis Station, S. C., writes us under date of Oct. 5th, 1920: The 100 bu. of Cleveland Big Boll bought of you this year gave perfect satisfaction. I am more than pleased with your seed.

Our Special Cotton Seed Catalogue goes more into detail in describing our varieties of Cotton.. Write for it if you want one.

All Cotton Seed put up in new 2 $\frac{1}{2}$ bu. bags with name of Cotton on each bag.

All of Mixson's

Seed are Good

Mixson's' Extra Early Big Boll Cotton

Our Own Production of a Large Boll Early Maturing Cotton

A Cotton that produced more lint to the acre than any of the 68 leading varieties tested on the Clemson College Experiment Farm, and one that matured before any of the other large bolls in the test. Read below for full information.

This is a large boll cotton, closely and heavily fruited and the earliest large boll cotton that we know of. The cotton turns out 38 to 40% lint and the staple 1 to 1 1/2 inches in length, the bolls run 55 to 60 to the pound. In selecting this cotton all the known science in cotton breeding was used and the result is that we have the best all around cotton in existence.

In the variety tests at Clemson College, this cotton against 68 leading varieties of cotton stood first of all in yield and led all of the large bolls in early maturity. The yield per acre was 600 lbs. of lint to September 7th, and 1,000 pounds up to October 7th when the entire crop was harvested. We have only a limited stock of this seed so order early. Price \$2.50 per bu., 10 bu. \$23.50.

Varieties for Wilt or Blight Lands

Covington-Toole. For wilt or blight lands you should plant a blight or wilt proof cotton. The **Covington-Toole** and **Dixie** are the two best known varieties and are largely planted. Our stock of **Covington-Toole** has been getting better and better each year until now it's immunity to wilt is practically 100%. Of course some lands are so badly infested that a certain percentage of the most immune varieties will die, but our seed of this variety is as good or better than the best. It is a selection from the old Toole and has all of the good points of that cotton in addition to its wilt resistant qualities. Seed of this cotton is scarce and hard to get. Price \$2.50 per bu., 10 bu. \$23.50.

Elmore, Ala., Sept. 25, 1917.

W. H. Mixson Seed Co., Charleston, S. C.
Gentlemen: I have your letter in regard to the **Covington-Toole** Wilt Resistant cotton seed bought from you. I planted them along the side of **Simpkins** cotton seed, and they opened very nearly the same time. Will say that they are nearly as early as **Simpkins**. The land where I planted them had the Wilt the worst kind last year. This year it was clear of it where I planted your seed.

Yours respectfully, J. O. CHAPMAN.

Dixie. Our **Dixie** seed like our **Covington-Toole** is grown for us on wilt lands which makes it all the more immune to wilt. It was bred under the supervision of the U. S. Government and is recommended by them as an excellent variety of short staple wilt resistant cotton. The boll is medium and the plant is a heavy fruiter. The percentage of lint is 38 to 40 and the staple is 1 inch. Price \$2.50 per bu., 10 bu. \$23.50.

STALK OF COVINGTON-TOOLE COTTON

Long Staple Varieties

Webber No. 49. A well known early maturing variety of long staple cotton which is now planted throughout the entire cotton belt. It seems to be especially adapted to the Delta Lands of Mississippi and is also largely grown in Arkansas and other states. South Carolina is the home of this most excellent variety of Staple Cotton which is extremely early in maturing and which is highly recommended for the Boll Weevil country by those in a position to know. The staple is a full 1 1/4 inch in length, the bolls are large, running about 65 to the pound. It is a heavy producer in the field and is considered an excellent cotton to plant from a business point of view. Price, \$2.75 per bu., 10 bu. \$25.00. We have both the 49 and 82 strains.

Hartsville. This is another well known variety of staple cotton with bolls running 55 to the pound and staple running 1 3/8 inches in length. It is quite early in maturing but not as early as the Webber. We have the very best improved stock grown in South Carolina and will be able to take care of all early orders. Price, \$2.50 per bu., 10 bu. \$23.50.

Mixson's Wilt Resistant Staple Cotton.

This cotton was introduced by us five years ago and since then it has grown considerably in popularity. Those who bought it five years ago insist on having it now. The staple is 1 3-16 inches in length and the out-turn of lint is excellent. It was bred for us for planting on Wilt Lands and is Wilt Resistant. This makes it a very desirable cotton for a good many sections of the South. This cotton is early in maturing and produces easily a bale to a bale and a half to the acre under average conditions. We have only a very limited supply and no doubt will not be able to fill the demand. Price, \$2.75 per bu., 10 bu. \$25.00.

Meade. This cotton was introduced by the U. S. Department of Agriculture in 1917 and since then the acreage has been considerably increased each year. The lint resembles the Sea Island and runs 1 1/2 to 1 3/4 inches in length. It has all of the characteristics of short cotton with the exception of the extra long lint. The percentage of lint is 29 to the hundred and it is quite early. It has been spoken of considerably as a substitute for Sea Island Long Staple which is too late in maturing to beat the Boll Weevil. To get the highest market price should be ginned on a Sea Island or Roller Gin. Price per bu. \$6.50, 10 bu. \$55.00.

The Hartsville, Webber and Mixson's Wilt Resistant Cotton are all ginned on the ordinary saw gin. However it is best to slow the gins down a little in ginning staple cotton.

Sea Island Long Staple. This is the highest grade of cotton known to the industry, but the Boll Weevil has played havoc with the production. On account of its long growing season required it cannot mature a crop before the Weevil punctures most of the bolls. If the poisoning method is a success it will be grown again but otherwise it cannot be grown. There are only a few sections of the cotton belt in which this cotton is a success. Quite a lot has been grown in South Georgia, but the Sea Islands around Charleston are its natural home, and when planted elsewhere new seed has to be gotten from the islands each year. We being situated in the center of these islands and being familiar with each of the growers, are the logical people from whom to secure your seed. There will be quite a shortage on account of the acreage which has been reduced 90%. This cotton must be ginned on a Sea Island or Roller Gin. Price, \$6.00 per bu. of 42 lbs. A bushel will plant 4 acres.

The prospects for Long Staple Cotton seem very encouraging on account of the increased use of this cotton in the manufacture of automobile tires, etc.

Our advice is not to plant too much cotton but what you plant be sure to have good seed, as poor seed will ruin your prospects before the cotton begins to grow.

Mixson's High-Grade Field Seeds

In the next few pages we list a number of very excellent Grains, Grasses and Legumes and the intelligent planting of these will decidedly increase your farm prosperity, both by providing nutritious feeding for your Cattle and Hogs and increasing the fertility of your land. The South today is coming to the front as a Cattle and Hog country, and there is none better on earth, but it will never take the place it should in this industry until

we have the proper pasture lands and crops for them. What good do it do if you have the finest blood lines to be had in your Hogs, if you don't supply them with the food needed for their proper development? With our climate in the South, these crops are easy to grow. If you want information about any of them is wanted, see your County Demonstration Agent, or write to your State Agricultural College. We ourselves will be glad at any and all times to supply any information we can.

Our Ginning Machinery Makes Our Seeds Pure

One great trouble in many Field Seeds is the presence of weed seeds which are harvested with the seed, and it is a great problem to get these out. This can only be done with improved seed cleaning machinery such as we have. Our largest machine has a capacity of a car load a day, is equipped with all the latest improvements, and every lot of seed that enters our warehouse is either of known purity or it is run through the cleaner. Our machinery is in charge of an expert who thoroughly knows

this business, and is capable of making the very finest separation down to the coarser ones, such as work on Corn, Cow Peas, etc. It pays absolutely to buy re-graded seed, and this is the kind you get from us. The next time you are in Charleston, stop in and see us, and we will be glad to show this machine to you. If you once saw the trash and weed seeds that come out of supposedly clean seed, you would be surprised. **BUY SEED INSURANCE BY BUYING MIXSON'S SEEDS.**

Cow Peas

It is impossible at this time to quote Peas, as we cannot tell what they will be worth at planting time. We expect to have a full stock at all times of the following varieties: Whippoorwill, Wonderful or Unknown, Brabham, Iron, Clay, Black-Eye, Red Ripper and Mixed. Write for prices when you are ready to buy.

Soy or Soja Beans

The planting of this crop has increased very largely during the past few years, and it is one of the most valuable for the South. It is very much like the Cow Pea for general uses, though it has decided advantages over Peas. It is a legume, and, therefore, improves the soil equally as much if not more than Peas. Besides, it is erect in growth, while the Peas are very often viney in growth, and therefore difficult to handle. Soy Beans can be easily cut and cured, and when used as hay the product is preferable to Pea-vine hay, as stock like it better.

A mixture of Soy Beans and Cow Peas also does well, as the stiff stalk of the Beans supports the Peas and makes cutting easier. They can be sown both in rows of 2½ feet, or broadcast, and if to be cut for hay, it is advisable to sow thickly to prevent the stalk from getting too coarse. If sown in drill, one-half bushel should be planted to the acre, and if planed broadcast at least a bushel and a half should be used.

Mammoth Yellow. The most popular variety of this Bean. Makes a large yield and is the strongest grower. Lb. 20c, 2 lbs. 35c, postpaid. Ask for prices on other varieties, and larger quantity.

Teosinte

This is undoubtedly one of the most valuable forage crops to use as a green feed for stock. You can plant it in rows about 2½ or three feet square and it will make a solid mass of forage. We urge our customers to plant at least enough of this great forage to try it out for themselves. We are confident that you will be amazed at the enormous amount of good forage that it will produce. Should be planted about the same time as sorghum. Prices, ¼ lb. 30c, lb. \$1.00, postpaid.

Rice

For upland and lowland. We have an excellent supply of Seed Rice. This crop is especially profitable at present and comparatively easy to grow. For several years we have had an increasing demand for our rice seed from all parts of the South. Sow in drills 20 pounds to acre. We have both White and Gold. Lb. 35c, postpaid. 10 lbs. \$1.75, 40 lbs. \$6.00.

Peanuts

Plant during April or May. Nuts shelled before planting will germinate quicker. Sow in 2½ to 3 foot rows, dropping the nuts about 8 inches apart. Lime should be applied to the plants after they are well up, and a top dressing of land plaster at the last working is advisable. This will make the nuts fill out, and you will have few "pops". Two bushels plant an acre. Ask for special prices in 10-pound lots or more.

White Spanish. The most popular variety, are planted very largely as a forage and fattening crop for hogs and other stock. The pods are small, with strong-growing upright stems. The hay is very rich in protein. Hogs can be turned in on the patch, or you can pick the Peanuts and feed the vines. They are easily harvested on account of the upright, bushy growth. Very often it is planted in late Corn between the rows. Pound 25c, 3 lbs. 55c, postpaid.

North Carolina. A running Peanut. The pod is larger than the White Spanish. Many tell us that they can stay in the ground all winter and not rot. On account of this they are fine for hogs, as you can turn in the hogs and they will do the harvesting. Pound, 25c, 3 lbs. 55c, postpaid.

Valencia. This is the large improved Spanish Peanut, having 4 to 5 large, rich, sweet nuts in each hull. These are the best land and plenty of acid phosphate. When properly selected and sold as parched peanuts, they bring the highest prices. Lb. 30c, 3 lbs. 55c, postpaid.

Ask us for prices in quantity on all varieties.

Chufas

There is no better hog fattening crop than Chufas. An acre of Chufas is worth easily as much as forty bushels of corn and with the increase in the number of hogs in the South, Chufas should be planted more. After the crop is grown, turn the hogs in and they will do the harvesting. Plant in 2½-foot rows, dropping nuts every 10 inches. Plant during April, May, June, and during September the hogs can be turned in. Two bushels will plant an acre. Price, 1 lb. 35c, postpaid, 10 lbs., not prepaid, at 25c per lb.

CHUFAS, or GROUND ALMOND

Bermuda Grass

A valuable perennial grass, and the foundation of the best permanent pastures in the South. Stands hot suns well, and will furnish summer pasturage than any other grass we know. It endures drought and on the other hand does not seem to be affected by too much water. It also makes excellent hay, the quality of it being in the class. When Burr Clover and Bermuda are combined, it makes at the year around pasture, the Burr Clover being green in the Winter and the Bermuda in the Summer. In order to succeed with Bermuda land must be in the best possible shape. It is very often started by planting the roots or pieces of sod, but this method is very expensive. It can be planted broadcast in the Spring, 8 lbs. to the acre. Do not plant too early as the seed takes warm weather to germinate. Cover 1 lb. and roll. Lb. 90c, postpaid. 10 lbs., not prepaid, at 75c per lb. Write for price in larger lots.

Beggar Weed. Indigenous to Florida and adapted to all soils. Makes a fine pasture, also a split hay crop. You can cut for hay when the first flowers appear, and will get a second crop which will bear seed and enough will be shat to insure a crop for next season. It can also be planted in Corn row the last cultivation. Plant between April and August about 10 lb to the acre, and the thicker the stand the finer the hay. The seed is firm do not cover too deeply. It is by no means a pest and can be eradicated at any time. It is a land renovator. Lb. 50c, 3 lbs. \$1.10, post 10 lb. lots, not prepaid, 30c, per lb. Write for price in larger lots

Sorghum, or Cane

No farm should be without this valuable crop. It is growing in popularity every year, for there is probably no crop out of which so much can be realized with as little expenditure. It is continuously growing, and when planted early can be cut several times during the season, as it grows till frost. It can be either fed green or cured as hay. It is liked by all stock. Very often it is planted with Cow Peas. If it is to be cut green, plant in 2½ foot rows, using about six quarts of seed to the acre; if it is to be cut for hay, plant broadcast at least a bushel to the acre.

Early Amber. This is the earliest variety of Sorghum and in the South is planted mostly for forage, both as a green food and as hay. It grows tall and has a small stalk with lots of fodder and will make more good hay than any other variety of sorghum. If you plant Early Amber with peas, it should be planted thick, because it makes a smaller stalk when it is thick. Price, per lb. 15c, 3 lbs. 30c, postpaid. 10 lbs., not prepaid, at 6c, 25 lbs. at 5½c, 100 lbs. at 5c per lb.

Early Orange. This grows very much like the Amber, except that it makes a larger stalk and less foliage. It is used for forage as well as for syrup. Makes very good syrup and the stalk contains much juice. Price, per lb. 15c, 3 lbs. 30c, postpaid. 10 lbs., not prepaid, at 6c, 25 lbs. at 5½c, 100 lbs. at 5c per lb.

Red Top. This Sorghum matures about ten days later than the Early Amber and makes a much larger stalk. It is used mostly for syrup, although it makes excellent forage. Very popular in Tennessee and North Georgia. Price, per lb. 15c, 3 lbs., 35c, postpaid. 10 lbs., not prepaid, at 6c, 25 lbs. at 5½c, 100 lbs. at 5c per lb.

Sugar Drip. This is a superior syrup Sorghum. It makes syrup of extra fine quality. As a stock food for ensilage or dry forage it ranks very high, as it contains more sugar than Amber, Orange, or Red Top. Lb. 20c, 3 lbs. 45c, postpaid. 10 lbs., not prepaid, at 11c, 25 lbs. at 10½c, 100 lbs. at 10c.

Yellow Milo Maize. This makes a thick, succulent growth of foliage, very nutritious and of splendid milk producing qualities. This, like sorghum, can be cut over two or three times, where it is desired to cut for green forage. Also makes excellent ensilage, or can be cured same as other sorghums. Lb. 15c, 3 lbs. 30c, postpaid. 10 lbs., not prepaid, at 6c, 25 lbs. at 5½c, 100 lbs. at 5c.

Texas Ribbon Cane. Very prolific in juice and is the sweetest of all sorghums. It makes a large stalk and is very largely used for molasses. It also makes a good forage crop, is greatly relished by all stock, and is one of the best sorghums we have. Lb. 20c, 3 lbs. 40c, postpaid. 10 lbs., not prepaid, at 11c, 25 lbs. at 10½c, 100 lbs. at 10c per lb.

White Kaffir Corn. Rapidly becoming a favorite in the South for its drought resisting qualities. Plant stocky and erect with wide foliage which makes the finest kind of forage. Two to four heads of grain produced by each stalk. If cut just before heading, shoots spring from the roots producing a second crop of forage and a grain crop. Plant in 3-foot rows and cultivate the same as corn. Plant eight pounds of seed per acre, sowing it in the rows like other sorghum. Lb. 15c, 3 lbs. 30c, postpaid. 10 lbs., not prepaid, at 6c, 25 lbs. at 5½c, 100 lbs. at 5c.

KAFFIR CORN

Feterita

A new drought resisting forage plant which has given most excellent and satisfactory results wherever it has been sown, and is remarkable for its drought-resisting qualities. Feterita is earlier in maturity than Kaffir Corn and is considered superior, both in grain and fodder production. We sell it quite generally throughout the South every year, and have received very satisfactory reports from our customers who use it. Feterita should be planted and cultivated the same as Kaffir Corn, after the ground and weather get warm, from April to July. Price, lb. 20c, 3 lbs., 45c, postpaid. 10 lb. lots and over, 16c per lb, not prepaid.

Sudan Grass

Laughs at Drought—Smiles with Rain. It should not be planted till the ground is warm in the Spring. Seeding in drills seems to do best, for then you can work it several times. Put the rows about 2 feet apart. 6 pounds of seed to the acre. It can also be sown broadcast, or put in with a grain drill. Then it will take about twenty to twenty-five pounds of seed.

Sudan Grass is easily cut with a mower and cures readily the same as Millet or Sorghum. The best time to cut is when it is just past full bloom. After the first cutting the grass stools considerably, and in from forty to fifty days another cutting is ready.

It is drought resisting, and this is one of its best qualities, as very often the prospects of fine crops in the Summer are spoiled by dry weather. There is considerable danger of getting seed mixed with Johnson Grass, and care should be taken to secure them from a reliable source. Ours have all been tested, and can be relied on. Lb. 25c, postpaid. 10 lbs., not prepaid, at 12c, 25 lbs. at 10c, 100 lbs. at 10c.

Lespedeza or Japan Clover

A very valuable pasture and hay crop for the South. It is a legume, and therefore improves the soil. It will yield several cuttings a year, the same as Alfalfa, and is also a perennial, rapidly taking possession of the land. However, it can be eradicated if desired. Instead of cutting for hay it can be pastured, and either the pasturage or hay is relished by stock. Sow in March or April, 25 pounds to the acre, in a well prepared seed bed. 25 pounds to the bushel. Lb. 50c, 3 lbs. \$1.35, postpaid. 10 lbs., not prepaid, at 35c, 25 lbs. at 32c, 100 lbs. at 30c.

Pearl, or Cat Tail Millet

Also called Horse Millet. This is one of the most useful millets for the South. It can be planted early in the Spring and you can make continuous plantings all through the summer. It is used extensively for cutting for feed green and grows out again very quickly; in fact, in three or four days you can see it has grown several inches. Can be cut about every ten days to two weeks. Does well all through the South. Plant in drills, rows three feet apart, at the rate of 5 pounds per acre, or broadcast for hay at the rate of 40 pounds per acre. Price, per pound, 35c, 3 lbs. 85c, postpaid. 10 lbs., not prepaid, at 25c, 25 lbs. at 23c, 100 lbs. at 22c.

Rape

Rape is one of the leading fat and muscle-building foods. The seed has been and is now being sold for a great deal less than its value, when you give the plant or crop credit for its actual worth. It grows well over a very wide range of soil and climate, is one of the easiest forage crops to grow, and produces in the shortest time a tremendous quantity of rich, succulent, health-giving feed that will keep stock of all kinds in fine condition. For cows it is profitable because of the great increase in rich milk flow, which it produces. Be sure to plant a good size patch or a few acres of Rape fall and spring. Write to the Department of Agriculture, Washington, D. C., for bulletin on Rape Culture and its food value. Plant on any land that will grow cabbage, turnips, cotton or corn. Plant in rows 2½ feet apart, 5 lbs. seed per acre or 10 lbs. an acre broadcast. Price 25c lb., postpaid. 10 lbs., not prepaid, at 15c.

Golden or German Millet

This is one of the best hay crops for the South, the hay being of fine quality, ranking as high as Timothy. It is easily grown and cured, and matures very rapidly. It is best sown about April 15, on well prepared ground, and it should also be well fertilized to give best results. Results will be worth the expense of this preparation as the yield will be greatly increased and the quality of the hay is very high. A common practice in some sections is to sow German Millet after truck crops which have been fertilized, and in this way it makes with little or no additional fertilizer. After Potatoes, Beans or Cucumbers it does well, and it can be planted as late as July, and the crop will come off in plenty of time to get in a Fall crop of grain or Vetch, etc. Good seed is an important factor, and ours is the very best. If you have not grown this crop before, it certainly deserves a trial, and if directions are carried out, you will be pleased. Lb. 20c, 3 lbs. 50c, postpaid. 15 lbs. \$1.80, not prepaid.

GOLDEN or GERMAN MILLET

Velvet Beans

The Greatest Known Forage and Soil Improving Crop for the South

This crop now needs no description. Every farmer knows it—knows its merits, its cheapness and its advantages, and possibly has a crop of them. But are we planting enough of them? Are we using them to the full extent to which we should? We believe not. There is no crop we can plant that will give us as much returns in proportion to cost as Velvet Beans, and every bit of left over ground that we have should be planted in them. They give a greater amount of forage in the same space of time than any other forage plant; they are superior to even Cow Peas as a soil improver; they are relished by all kinds of stock.

90 Day Velvets. The most popular variety. Hardy, a rank grower, and the most prolific of all varieties. They will mature beans in any part of the South, and will continue to bloom and bear till killed by frost. It was bred from the Florida Speckled which it closely resembles, but it is much earlier, which accounts for its displacing the old time variety. Lb. 15c, postpaid; peck, not prepaid, 75c. Write for bushel price.

Osecola. Originated a few years ago, and fast becoming very popular. The bean itself is much larger than the 90 Day variety, and the pod is much tougher, which some consider a disadvantage. There is, however, the absence of fuzz on the pod which makes picking easier. Lb. 15c, postpaid; peck, not prepaid, 85c. Write for bushel price.

Carpet Grass

Strictly a pasture grass, and specially adapted to light or sandy soils near the Coast or Gulf sections. It is capable of being very closely grazed or trampled, and in fact seems to do better when trampled. It has a creeping habit of growth which enables it to spread rapidly when close grazed. When a patch once becomes established, it spreads very rapidly, and on a well trampled field, a good sod will be established in two years. It is best seeded in the Spring, and attains its best development during the Summer and Fall. It seeds in September and October, and while it cannot be depended on to give very much if any green feed during the Winter, frost and cold does not kill it. It needs sunshine for its best growth. There is little danger of grazing it too closely, and a good carpet grass pasture will support as much stock as a good blue grass pasture. This valuable grass has sprung very recently into prominence and its use is being advocated by many Agricultural authorities. Per lb. \$1.00, postpaid; 10 lbs., not prepaid, at 85c. Write for prices in larger quantities.

Dallis Grass

This does not seem to do well on very sandy or light soils, but thrives best on bottom and low lands. It is a valuable pasture grass, and bears very close grazing. The plants come up in clumps, and it is really advisable to graze them closely so that they will spread. It can also be cut for hay and it is of good quality. This grass is difficult to propagate as it does not spread from runners. The seed moreover is hard to get to germinate. Fortunately, however, the grass is hardy, and when it is once started, spreads to other places, though the spreading is not as fast as some others. It is not a pest and can be easily eradicated. The seed is best sown broadcast, 8 lbs. to the acre, and then disked or harrowed. Land should be well prepared. Per lb. \$1.00, postpaid; 10 lbs., not prepaid, at 85c. Write for prices on larger quantity.

If You Are Planting Legumes, Be Sure to Inoculate

Practically all progressive farmers now know the advisability of this. Of course the seed will germinate, and no doubt a crop can be produced, but you certainly get your full development either in crop nor in nodules unless your soil is inoculated, and practically all Southern soils are deficient in these bacteria. They can be best supplied by using

Mulford Cultures

They are made by the H. K. Mulford Co., Philadelphia, a concern with a world-wide reputation as manufacturers of inoculating bacteria, serums

Chinese. A most vigorous grower, producing more vine and bean than either of the above varieties. It is also very quick in maturing beans, and this is a decided advantage in the more northern sections of the South. The pods are extremely large, containing 5 or 6 beans. It is a later introduction than either of the other varieties, we really expect big things of it. Lb. 20c, postpaid; peck, not prepaid, \$1.00. Write for bushel price.

Bush Velvets. This variety was introduced a year or two ago, but we have never offered it to our trade. The rule is to always satisfy ourselves of the merits of varieties before recommending them, and this we could not do with this variety. We do mean to say that putting out this variety was not a good idea, nor do good stocks did not exist, but we were afraid that, knowing the ancestry of the bean as we did, that it would revert to its original type, or in other words that the type was not "fixed". Results last year show us that we were right, and we saw many Bush Velvets throw runners six feet long. Selection will gradually eliminate these, and finally a true stock will be developed. Just at present we have none to offer, but if we can get a stock in which we have the proper confidence, we will buy them. We will, therefore, before you purchase. We may have them, and if we do, we will give you something good.

Rhodes Grass

Specially adapted for planted in the far South, but not recommended for planting where temperatures will get below 15 to 18 degrees. Preparation of the soil is the first essential to success, for the plant will not grow off well on illprepared land. It has a large foliage, stooling rapidly, growing three to four feet high, and the quantity of the hay is said to be equal to the finest Timothy. While it can be grown as an Annual in colder climates, this is not generally recommended. About eight pounds of seed required for an acre. Per lb. 80c, postpaid; 10 lbs., not prepaid, at 60c. Write for price on larger quantity.

Mixson's Perpetual Pasture Mixture

For several years we have been putting out this mixture in all different parts of the South, have given it exhaustive tests at Perdale, and know of none better. There is no one grass or clover that will fill all the year round grazing—this is attained only in a mixture, and it is the result of years of investigating, trying, etc., to so arrange this mixture. It is best sown in the Autumn, though it can also be planted in the Spring. Good preparation of land is essential. The seed should be broadcast at the rate of 35 lbs. to the acre. Some of the seeds are heavier than others and will therefore go to the bottom of the sack or bucket, and therefore advisable to keep it mixed up when sowing. This mixture contains a number of excellent grasses and clovers which succeed other so that a continuous growth is the result. Practically every man puts out a mixture of this kind, but ours is offered only after careful trials and tests. Furthermore the seeds used in it are the very best quality. We invite correspondence at any time. If, on the other hand, you have a formula of your own that you prefer to use, write us up that, and we will give you prices on the different seeds. Price 50c per lb., postpaid; 10 lbs., not prepaid, at 35c. Write for prices on quantity.

and anti-toxins. On account of the way in which they are made up, there is no chance of contamination, and they come to you pure and virile. They have an interesting booklet on inoculating it is yours for the asking.

We have this culture to inoculate all Clovers, Alfalfa, Vetches, Beans, Velvet Beans, Cow Peas, Lespedeza, Peanuts. Price, \$1.50 per acre; 5 acre bottle, \$5.00. Be sure to specify the crop you intend to use it on.

All of Mixson's

Seed are Good

Alfalfa The Great Permanent Hay Crop for the South

As the South turns more and more to livestock, it should turn more and more to Alfalfa, and we are glad to say that it is doing so. It will give abundant returns for the money invested, and the quality of the hay is of the very highest rank. It will enable the stock raiser to have more stock and it is equally valuable to the dairyman as a producer of milk.

Alfalfa is probably best seeded in the Fall, but excellent results are also obtained by Spring planting, so that if you have your land ready this Spring, you need not wait. One thing, however is essential, and that is thorough preparation. Remember that you are planting a crop that you expect to be permanent for years, and a great deal of your success depends on the condition of the land before you sow your seed. Then again if your land shows any acidity at all, this should be corrected by a liberal application of lime. It should, moreover, be inoculated, and you will find this small cost amply covered by the returns. We have seen many fields both inoculated and uninoculated, and there is no question as to the difference. Sow the seed either broadcast or in drills at the rate of 35 lbs. to the acre.

Less is sometimes used, but there is danger of not getting a first rate stand. Alfalfa produces on an average 5 tons to the acre a year, and will stand four cuttings. It improves the soil as it grows, and its long roots penetrate deep into the subsoil. It therefore resists drought because it gets moisture where other crops cannot.

Don't buy cheap Alfalfa seed—it is dear at any price, because as we have said before you are making an investment on which you expect to cash in for a number of years. Cheap seed invariably contains weed seed, is low in germination, or is produced on irrigated land, which seed is no good at all for planting in the South. We made up our minds a long time ago to handle nothing for seed showing over 99% purity, and which has been produced on non-irrigated land. Be sure, therefore, that you investigate well the source of your seed. If, therefore, you will attend to the proper preparation of your land, and leave the seed question to us, you will have your Alfalfa problem very largely solved. Price 50c per lb.; 10 lbs., not prepaid, at 35c per lb. Write for prices in large quantity.

Mixson's Clover and Vetches

Most of these Clovers and Vetches are sown in the Summer and Fall, and we are therefore not devoting much space to them in this Catalog, but will describe them more fully in literature we intend to get out this Summer. If you do not get it in time, write us, and we will be glad to give any and all information available. They fill a very definite place in Southern Agriculture, and there is no farm that should be without its winter pastures, cover crops, and legumes. A great many of these Seeds are imported, and located as we are at Charleston, with excellent import facilities, we can serve you to advantage. We take the goods here right off the boats, and in buying from us you buy as a rule from first hands. Some of these are sometimes planted in the Spring, and if you want to put in some this Spring, be sure to write us. We can probably save you money, besides giving you the very highest grade seed. Prices quoted below are subject to changes.

Red Clover. An excellent pasturage and hay crop, besides being a soil improver. Especially recommended for sowing in mixtures with Orchard Grass, Tall Meadow Oat Grass and Red Clover. 12 lbs. to the acre. Lb. 60c, postpaid; 10 lbs., not prepaid, at 40c lb.

Alsike Clover. Thicker and finer stemmed than Red Clover, also harder than most any other clover. Particularly valuable for grazing. 8 lbs. to the acre. Lb. 55c postpaid; 10 lbs., not prepaid, at 40c lb.

Crimson Clover. The standard Clover for the South. Sow it in all vacant fields for winter pasture. Greatly improves the soil and you will see the difference next year in your Corn or Cotton. A crop of Crimson Clover plowed under is worth \$25.00 per acre to the land, and you get your grazing besides. Lb. 25c, postpaid; 10 lbs., not prepaid, at 12c lb.

White Sweet Clover. Belongs to the Alfalfa family, but succeeds on a wider range of soils and under more adverse conditions than any other Clover. A soil improver of the first rank, useful for pasture, forage, silage, and very often used too to inoculate the land for a crop of Alfalfa. Lb. 45c, postpaid; 10 lbs., not prepaid, at 32c per lb.

White Dutch Clover. Makes a small, close, compact growth, very close to the ground. Used generally in lawn and pasture mixtures. Lb. 90c postpaid; 10 lbs., not prepaid, at 75c per lb.

Burr Clover. A most valuable winter grazing crop. Reseeds itself each year, and for this reason works well in a combination with Bermuda Grass. Lb. 35c, postpaid; 10 lbs. not prepaid, at 22c per lb.

Hairy Vetch. The best Vetch for the South. Hardy, easy to grow, producing hay of the very finest quality as well as being a soil improver of the first rank. On account of its viney habit of growth, it is generally planted with Rye, Oats, or Wheat. We specialize very largely in Hairy Vetch and are able to give you seed of the highest quality at right prices. Sow 20 lbs. to the acre with 1 bu. of Oats or Rye. Lb. 35c, postpaid; 10 lbs., not prepaid 25c per lb.

Augusta Vetch. Not near as hardy as the Hairy variety, and will winter kill at below 15 degrees. Price of seed, however, is much lower, which warrants many for taking a chance. Lb. 25c, postpaid; 10 lbs., not prepaid, at 10c per lb.

Glycone Seed Sower

A VERY POPULAR SEEDER AND VERY EXTENSIVELY SOLD

This sower is guaranteed to distribute seed perfectly, evenly, and will not throw seed in an upward direction or against the operator, but direct and evenly to the land. Sows clover, timothy, red top or herds grass, alfalfa, oats, rye, wheat, millet, turnip and other varieties of farm seeds. It also distributes bone dust, land plaster and fertilizer to advantage. Clover seed is sown a width of 18 feet; timothy, 15 feet; alfalfa, 20 feet; wheat, 25 feet, millet, 18 feet; oats, 18 feet. Thus, it will be seen that one operator can sow from 40 to 60 acres per day, according to the kind of seed. Price \$2.75, postpaid.

High-Grade Oats

The planting of Oats in the Spring is becoming more and more popular every year, and we think there is no doubt but that as a rule Fall sown Oats do better, we have heard of some mighty fine crops being made from Spring Oats. We list below only such varieties as specially adapted, and our stocks will be found uniformly heavy, clean, bright, and free from Johnson Grass or other noxious weeds.

Burt or 90 Day. Possibly the most popular variety for spring planting. It is early in maturing, produces good stiff straw and we have known some excellent crops. The Oat itself somewhat resembles the Red Rust Proof, but it is slightly smaller in size and lighter in color. We have the genuine stock. Peck 35c, bushel \$1.25, prepaid. Write for prices in larger quantity.

Fulghum. Also adapted to planting in the Spring. It is a very heavy Oat, free from beard, and is only a few days later than the Burt. Our stock is strictly Carolina grown and can be depended on. It is probably the heaviest Oat on the market. Peck 50c, bushel \$1.75, not prepaid. Write for price on larger quantity.

Red Rust Proof. This old standby variety is still very extensively planted over the South, and is also adapted to Spring planting. Texas is the state from which to get the genuine stock, though it is now offered from many other sections. We know our genuine Texas stock will please you, and we are sure are worth a great deal more than stocks from other localities. Peck 35c, bushel \$1.25, not prepaid. Write for prices in larger quantity.

We have also excellent stocks of APPLER, 100 BUSHEL, BANCROFT. Write for prices. Prices on Oats as well as all other grains fluctuate very rapidly. Our quotations are therefore, only subject to change. Write us when ready to buy. Probably we can save you money.

Seed Rye

Carolina Tall Growing. Our largest seller. Does not stool or creep like other varieties. Northern and Western. Excellent for grazing. Very hardy and does not winter kill as easy as some of the others.

Rosen. A new introduction, extensively planted now in the West. Gives a stiffer straw and more grain is claimed for it. Seed is larger than other varieties, with a blueish-green cast.

Abbruzzi. Very quick growing, being in condition to pasture before other sorts. Does not stool as much as others. Our stock is all South Carolina or Georgia grown.

Georgia Black Rye. Produces a big crop. Does not stool and is strictly climatized.

These varieties of Rye as well as others will be more fully described in our Fall literature ready about August 1. Write for prices.

Barley

Spring Beardless. Increasing in popularity every year, and by many considered much safer crop than Oats. Sow in February, 1½ bu. to the acre. Ask for price.

Winter Bearded. Sow only in the Fall. Price will be named about August 1.

Wheat

We will have this Autumn and Fall a good stock of all standard varieties, including Leap's Prolific, Blue Stem, Purple Straw, Red May, all of which are beardless or smooth head varieties, and Fulcaster, which is bearded, as well as some other sorts. All will be re-cleaned and adapted for seeding purposes. Write for prices.

Tobacco

We will have the very best Virginia grown stocks of several popular and well known varieties. The price of seed is nothing compared to the money you have invested in this crop, therefore it pays to get the best. Write us, and we will be glad to give full information regarding prices, varieties, etc.

Miscellaneous Grasses

Italian Rye Grass. A very quick growing grass, furnishing excellent grazing during fall, winter and spring. It is generally mixed with other grasses or clovers. One of the best quick growing hay grasses. 25 lbs. to the acre. Best time of seeding is in the fall. It is an annual and needs re-seeding each year, unless allowed to stand. Lb. 30c, 3 lbs. 80c, postpaid; 10 lb. lots, not prepaid, 17c per lb. Write for price in larger lots.

English Perennial Rye Grass. Produces an abundance of foliage, and is becoming more and more popular as a pasture as well as a hay grass. Stands very close cropping. 25 lbs. to the acre. Lb. 30c, 3 lbs. 80c, postpaid; 10 lb. lots, not prepaid, 17c per lb. Write for price on larger lots.

Kentucky Blue Grass. Hardy, will stand the coldest weather, and close grazing does not hurt it. It will probably take a year to be ready for grazing, but when a good sod is once secured, you have a valuable asset on your farm. Fall sowing is the best, but success is also had with Spring planting. 35 lbs to the acre. Lb. 60c, 3 lbs. \$1.35, postpaid; 10 lb. lots, not prepaid, 40c per lb. Write for price in larger lots.

Orchard Grass. Very valuable as a pasture grass, growing well in the shade. Grows in tufts, not making a true sod, and is therefore best sown in mixtures. 30 lbs. to the acre. Fall sowing is best. Lb. 50c, 3 lbs. \$1.10, postpaid; 10 lb. lots, not prepaid, 30c per lb. Write for price in larger lots.

Timothy. The best known hay grass. Requires good land, preferring bottom land, or heavy loam or clay soils. It stands up well and is easily cured. Sow 12 lbs. to the acre. Per lb. 40c, 3 lbs. 90c, postpaid; 10 lb. lots, not prepaid, 17c per lb. Write for price in larger quantities.

Tall Meadow Oat Grass. Makes a good hay crop as well as a good pasture. It is most often mixed with other grasses and Red Clover. For hay when in bloom. It stands summer drought as well as winter cold exceptionally well, making it one of the hardest grasses we have, 30 lb. to the acre. Per lb. 65c, 3 lbs. \$1.40; postpaid; 10 lb. lots, not prepaid, 45c per lb. Write for prices on larger lots. Can be sown either Spring or Fall.

Red Top or Herds Grass. One of the easiest grasses to start, increasing year, and is adapted to a variety of soils in the South. Makes excellent pasturage as well as a good hay crop. Plant 10 lbs. to the acre. 45c, 3 lbs. \$1.00, postpaid; 10 lb. lots, not prepaid, 25c per lb. Write for price in larger quantity. Best sown in the Fall.

Meadow Fescue. A deep feeding grass, very hardy, specially adapted to heavy and loamy soils. Makes a very heavy foliage. Sow 30 lbs. to the acre. Lb. 65c, 3 lbs. \$1.40, postpaid, 10 lbs., not prepaid, 45c per lb. Write for price in larger lots. Best sown in the Fall.

The basis of all profitable Agriculture is soil fertility and soil fertility of any farm is in direct proportion to the amount of Humus. On what therefore does humus rest? Clovers and Grasses. A Farm with plenty of Clovers and Grasses is a Farm with humus—a fertile Farm.

Mixson's Selected Corns

MIXSON'S TEN PER CENT. COB CORN

All grown and selected especially for our Southern trade. Not showy ears of Western and Northern Corn, but well bred selections of Southern varieties, adapted to our soils and climate—varieties that have the inbred qualities that make them "crib-fillers" in the South. All selected, butted and tipped, shelled, fanned, and screened, presenting a uniform stock of each variety.

Mixson's Ten Percent. Cob Corn. This is an introduction of our own, and one in which we take a great pride. We have been offering it to our friends for several years; and reports have been unanimously favorable. It is originated, bred, and the stock is grown right here in South Carolina, and it is therefore thoroughly acclimated. You need have no fear that it is brought in from elsewhere, and therefore might not suit your soil or climate, because it will.

It is a prolific Corn, bearing from two to four good ears to the stalk. Grains and cob are white, and the strong point about this Corn is the large percentage of grain it shells out in comparison with cob. In other words, in our tests, 100 pounds of Corn on the cob shells out 90 pounds of clean grain. We hardly think there is any other Corn to do better. The grains, in order to do this, must therefore, be pointed, and are closely set on the cob, eliminating practically all lost motion. In other words, when we started breeding up this Corn, our idea was to get Corn and not cob, and this is certainly what we got.

Moreover, in getting this feature perfected, we didn't have to sacrifice any other good feature. It weighs well, is hard, withstanding weevils well, and the ears are borne down on the stalk. The shuck is tight and comes well over the tips, so that it is not so quickly affected with bad weather or birds. Altogether, it is an excellent variety of Corn, and for general field use, we know of no prolific Corn that is better. Quart, 35c, postpaid; peck, not prepaid, \$1.10; bushel \$3.75.

Improved Marlboro Prolific. This is a very popular variety over the entire South, and we are able to supply seed of the very best quality. It is not especially early, but makes 2 to 3 good ears; grain and cob are white; and it is an excellent milling variety. Some of the best yields in the South have been made with Marlboro. Our stock is grown by a very careful farmer, and no better stock exists. Quart 35c, postpaid; peck, not prepaid, \$1.00, bushel \$3.50.

Paymaster. A famous single eared corn, very popular in Mississippi and Tennessee. Grain is white and pointed; cob is red. It is a first rate main crop corn, especially if you have strong land. Quart, 35c, postpaid; peck, not prepaid, \$1.00, bushel \$3.50.

Tennessee Red Cob. This makes an enormous ear and produces well when planted on strong land or in bottoms. Stalk is very large, too, and it takes good land to make it. The stalks have short joints, and are therefor tremendous makers of foliage, rendering this an excellent silage variety. Tennessee Red Cob is the best single eared Corn we have. The grains are large, pointed and slightly wrinkled on the edges. Quart 35c, postpaid; peck, not prepaid, \$1.00, bushel \$3.50.

Batt's Four Ear Prolific.

This is originally a North Carolina Corn, and the one Jerry Moore used when he broke the world's record for boys. It is a rather small eared variety, but grains are set closely together on the cob, and very often an ear of Batts will weigh more than a much larger looking ear of another variety. It produces from 2 to 4 ears, and grain and cob are white. Quart, 35c, postpaid; peck, not prepaid, \$1.00; bushel \$3.50.

Hickory King.

This is an old favorite, and is still extensively planted by many who will have no other. The grains are tremendous, one grain very often being so large as to cover the end of the cob. Corn is of good quality and makes fine meal. It does best on the upland sections of the South, and will make two ears. This is perhaps the showiest Corn we list. Quart 35c, postpaid; peck, not prepaid, \$1.00; bushel, \$3.50.

TENNESSEE RED COB CORN

Mixson's Six Ear Prolific

Mixson's Six Ear Prolific. Practically every farmer now in the South is well acquainted with Six Ear Prolific, and practically every seedsmen lists it. It is, to our minds, simply a question of being sure of getting pure seed. As to our want to say that the stock seed came originally from Georgia from what we consider the source of supply. Our crops are grown under our immediate supervision, far apart from any other variety is kept perfectly and absolutely pure, and this year was perfectly matured in the field. It will again be selected before being butted and tipped by hand, and after shelling will be fanned and screened. If it is possible to get purer seed we would like to know it.

The Corn itself is not an early Corn, in fact it requires a fairly long season. It grows large and vigorous, and on good strong land will make from four to six ears, in fact we have seen even more. The ears are well filled out, and while not as large as some one and two ears variety, they are very heavy, and weight is what you want anyway. During the past five years, the South has turned to prolific Corns as being the best producers, and Six Ear Prolific has taken a front rank. The grains are deep and hard enough to keep down weevil infestation to a minimum. The shucks, moreover, come well over the tip of the ear, protecting it against bad weather and birds. Altogether, we know of no prolific Corn that is so well adapted to so many uses, or different soils in the South. It is good for roasting ears, makes an excellent quality of meal, is fine for silage, and in addition makes high grade Corn for stock-feeding. Quart, postpaid, 35c; peck, not prepaid, \$1.00; bushel \$3.50.

Improved Southern Snowflake. We do not recommend this variety for general main crop planting, where you have a full season ahead of you for making Corn, but if you want an early field crop, or have to plant late in the replant, you will find Snowflake an excellent sort. It is the earliest Corn we list on these three pages; grain and cob are white, and it is excellent both for meal and roasting ears. It is a strong grower, producing a sturdy stalk, and will make excellent Corn on land so poor that other varieties often fail. Nearly always makes two good ears. Quart, 35c, postpaid; peck, not prepaid, \$1.10; bushel \$3.75.

Improved Early White Dent. This is the earliest general crop white Corn, and is one that is very popular. The grain and cob are white. It is early in maturing requiring about 100 days, and in many trucking sections is very largely planted after Potatoes, Cabbage, Beans, etc. There is any quantity of Northern and Western stock of this variety shipped into the South, but we have always stuck to our acclimatized strain, and there is no question but that it produces better. On good land it often makes two ears, and the ears are good-sized, well filled out, and our stock this year will be extra well matured and dried. Quart, 30c postpaid; peck, not prepaid, 95c, bushel \$3.25.

Improved Early Golden Dent. This variety is becoming more and more popular every year, and we believe that it is the best of the yellow or golden varieties. As is the case with the White Dent, large stocks of this corn every year from the North and West, handled very often by Grocery Houses, and in fact by our seedsmen, but the fact that we have held to the same source of supply for years and our business increasing every year in Golden Dent shows us that results are obtained from ours that are impossible with Northern and Western seed. It makes a good sized ear, with deep grains, and is a vigorous grower. It is early in maturing, as early as our White Dent, and in fact the main difference between the two is that one is white and the other yellow. It is on good land a two-eared variety, and we have seen even more. It is also very popular for planting after truck. This Corn is one of our best sellers, and we pay an unusual amount of attention to the selection of our stocks, and the way it is put out. All of it is re-cleaned on our special machines, and you will get a uniform Corn every respect. Quart, postpaid 35c; peck, not prepaid, \$1.00, bushel \$3.50.

Whatley's Prolific. This is a remarkable Corn, newly introduced, and we believe that it is destined to become very popular. It yields three ears to the stalk; and cob is red. It has a good root system which enables it to withstand drought better than most varieties; the quality is good, and it makes unsurpassed meal. While it cannot be classed one of the extra early Corns, we will say that it is medium early, maturing between White Dent and Six Ear. Everything that we have heard and seen of this Corn has been good. At the Georgia Experiment Station, Athens, Ga., it led all varieties in a three-year test, and it has held other excellent records in other States. It is to our mind a valuable acquisition, and will prove a very popular Southern variety in the South. It was originally bred in Georgia, and the stock we have is thoroughly acclimatized. Quart, 35c, postpaid; peck, not prepaid, \$1.10; bushel, \$3.75.

Mexican June. The corn to use for late planting. Does not do well if planted before June 15, and can be planted up to July 15. Stalks very large, foliage abundant, making it unexcelled for silage. No other corn can be planted so late, and yet make well. On account of these qualities, it is becoming very popular for planting after truck. Quart 3 postpaid; peck, not prepaid, \$1.15; bushel \$4.00.

MIXSON'S GENUINE SIX-EAR PROLIFIC
The Prize Winning Stalk

OUR LAST WORD

As 1921 comes in, practically the entire horizon is clouded with doubt and uncertainty. We have, however, infinite faith in Southern Agriculture, in its stability, and in its ultimate and continued success. The lessons we are learning every day now should be well heeded and remembered, so that in the future we may avoid as far as possible some of our present mistakes. Whatever may be said and done about Cotton next Spring, we should never be fooled away from our program of raising our own feedstuffs for ourselves and animals, and the keeping of all the hogs and livestock our lands will support. In this, SEEDS play an important part; the amount invested in them is but an infinitesimal amount when proper results are considered. It will pay you to use only the very best. Our aim is to have not only a seed business, but a seed service, of actual, helpful and intelligent cooperation.

We Always Want You to Buy
From Us at the Lowest
Possible Price.

We Want You to Always Feel Sure You
Have Bought to the Best Advantage.

That is why we are having this special inquiry sheet printed and sending it to you.

Send us on this a complete list of the seed you think you may buy for your own private use or get up a club among your neighbors. This will enable you to purchase the best quality of our High Grade Seed at the lowest and latest price.

We feel very sure that it will always pay you to get our prices and send us your order for if good seed and the right price, combined with immediate shipment, prompt and accurate service will hold your business and friendship you are not likely to make a change after sending us your order. We shall be pleased to quote you promptly and show what the seed you need will cost you delivered.

Awaiting your commands, we are,

Very truly yours,

W. H. Mixson Seed Co.

Mixson's Eureka---Our Prize Winning Corn

This is exclusively our own introduction. We brought it out several years ago, but in no season have we had enough seed to fill the orders we have received. We possibly could have had sufficient if we were willing to lower our standards just a bit, but this we would not do. Every ear had to go through the same rigid inspection, and if an imperfection was discovered was thrown out when the crib was getting low, just as it would have been at the beginning. This we believed was not only right, but good business, and it has so proved, because Mixson's Eureka has made good wherever planted, and is noted for its purity and uniformity.

This is distinctly a Carolina Corn—not a good looking Western Corn which has appearance and nothing else. It has breeding behind it, and you know “blood will tell”. It is white, with a white cob, turning out an extra good percentage of Corn to Cob. It is heavy, well filled out from butt to tip, and is the best two eared Corn we know. It runs twenty to twenty-two rows to the ear, grains are long and pointed, leaving but very little lost motion between the rows. When you plant Corn, you want grain, not

cob nor open spaces, and this grain is what you get when you plant Eureka. Just take a good look at the illustrations

on this page; see how well filled out the ears are and how closely set are the rows.

Mixson's Eureka Was the Result of An Idea---Not An Accident

Now, when we found this Corn it wasn't an accident, and we named it Eureka for a reason. We had been hunting for a long time for a satisfactory two eared Corn—a variety that had the qualities we thought a corn should have, but it seemed that every selection had some fault with it—then we found this one—tried it well before offering it to our friends, knew that the type was “fixed”—and then named it Eureka, which means in Greek, “I have found it”, and this is exactly the way we felt. It happened, however, that after we named it we found that some other seedsmen had Corns also named Eureka, but we couldn't change ours then—in fact wouldn't change it, because Eureka was just exactly what we wanted to say. These other Eureka's no doubt have merit, in fact we don't know anything about them, but the similarity of names doesn't make theirs and ours relations. We do know to our satisfaction that Mixson's Eureka is the best two eared main crop Corn you can buy anywhere.

The ears grow well toward the bottom of the stalk, and the shuck comes over the tips, greatly protecting it, and

allowing it to mature grain. It is a Corn fully hard enough to make it weevil resisting and a good keeper.

All of this Corn is closely selected, in fact as stated before, we have lost many sales on account of the strict inspections we made, and any quantities were thrown out, and for which some less far-sighted people would have thought us foolish, but when we put our name to a thing it has to be good, and every force for good that we have goes into it. This year it will be the same. Our crop was good; it matured perfectly in the field, and went into the barn in better shape than any other crop of Corn we have ever harvested. It will again be selected, and then butted and tipped by hand. After shelling, it will be run over our screens and an absolutely uniform Corn is the result.

Price of this Corn is not high; on the other hand, it is very low considering the amount of care and labor that goes into it. You will make no mistake in planting this variety—the best two-eared main crop corn. Quart 30c, postpaid; peck, not prepaid, \$1.15, bushel \$4.00.
